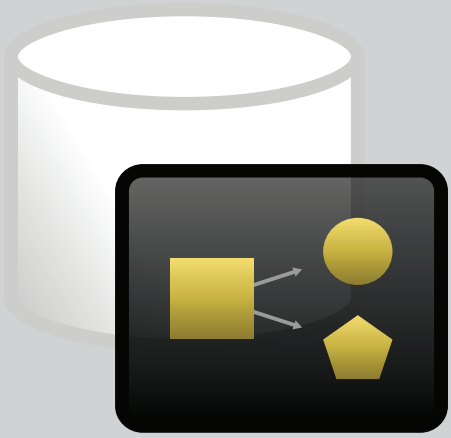
Software for converting data

The one-of-a-kind Command Translator bridges the gap between traffic data and end-use applications by providing a cost-effective way to get automated and immediate conversions between incompatible data formats and databases.



- Performs scheduled, triggered, and on-demand data translations
- Translates databases, data types, file formats, and data streams
- Connects legacy data collection & management systems to:
  - Emerging data standards
  - New reporting requirements
  - Other data management systems
- Web-based user interface allows remote management from any networked browser
- Provides notification of translation jobs
- Flexible TCP/IP interface & control
- Intuitive, at-a-glance status of all translation jobs and services
- Enterprise quality, rack-mounted server with multicore processors, RAID 5 disk array, and redundant power & networking
- Fully-definable user management
- Extensible functionality via Task-Builder translation developer's tool
