Cubic Machinery is expanding its lines of Swiss-Type CNC Lathes

Due to customer demand, Cubic Machinery has expanded its SG line of Fanuc controlled Swiss-Type lathes to include bar capacities from 12 mm-42mm and 8 axis capability.

The Cubic SG line was introduced at IMTS 2018 with the SG-20. The Fanuc controlled Swiss-Type lathe offered a 20 mm all purpose lathe with 21 tools, high pressure coolant and chucker mode capability. All with 7 axes and a tight footprint.

The SG-20 performed well for companies looking for an all purpose swiss, medical turning and the manufacturing of connector pins. Prompting Cubic to offer the SG-12, which debuted at Eastec 2019. A more specialized swiss-type machine, perfect for sub 5 mm parts. With its unique magazine bar feeder the SG-12 is able to handle small bar capacities delicately.

With the success of the SG-20 and SG-12, Cubic will begin to offer SG-32 and SG-42 as well as an additional Y-axis on all versions of the SG, allowing our customer increased machining options.

For more info on the SG series or any of Cubic Machinery's CNC lines, please call us at (909) 590-9995

The **Cubic GT Force** is a compact gang tool lathe available with 5 types of pre-engineered part feeding solution.

12 Station Rotary Stacker

In and Out Conveyors

Vibratory Bowl Part Feeder

10 Tray Palletizer

Perfect for machine shops with secondary lathe operations looking to offset the rising labor costs of hand loading.

New GT Force with
Epson Flexion N2
Compact 6-Axis Robots
