CANImmunize Partners with Nova Scotia to Launch VaxRecordNS

Platform opens doors for those with a Nova Scotia health card to access vaccination records online

HALIFAX, NS, May 4, 2023 – CANImmunize is excited to announce the launch of VaxRecordNS, a free web application developed in partnership with the Department of Health & Wellness and Nova Scotia Public Health. The VaxRecordNS website will be available on May 3, 2023.

VaxRecordNS is a new digital solution that will enable Nova Scotians to access their vaccination records online. The app authenticates users in real-time against Nova Scotia's My NS Account service and health systems to provide rapid and secure, on-demand citizen access to personal health information.

"Accurate and rapid authentication is one of the most challenging parts of any digital health solution," said Cameron Bell, CEO of CANImmunize. "VaxRecordNS shows the value of the investments Nova Scotia has made in their digital health programs, and sets the stage for an expansion of citizen access to health information."

CANImmunize is a Canadian digital health company that is working to build the technological future our health systems deserve. It developed ClinicFlow, the mass-immunization platform that supports the COVID-19, Influenza, and Mpox vaccine campaigns in Nova Scotia, and has been heralded as Canada's best COVID-19 immunization system by two independent reviews.
