

Ultimate U38/U39

Gas Stove

The clean lines of the Ultimate Gas stove wrap around its extraordinary fire. Your Ultimate fire can be turned up as high as 40,000 BTU providing high efficiency heat or turned down to 20,000 BTU to enjoy the fire view with

less heat. Replace your old woodstove, install into your existing masonry fireplace or warm up your kitchen, bedroom or den as you lower heating bills.

Ultimate U39 gas stove with wrap around nickel door and nickel louvers

Regency Gas Stoves are versatile, efficient heaters that add comfort to your home. Enjoy the unique style of a freestanding stove with the convenience of gas and reduce your heating bills.

Direct Vent Technology

Direct vent technology means that you can install a Regency stove almost anywhere in your home - no chimney is needed. From the top of the unit, simply vent your stove through an exterior wall. Direct vent means that you have sealed combustion - outside air is brought in through the vent for combustion and the used air is sent back out - your indoor air is not affected.

Comfort Controls

Control your comfort with a Regency remote or thermostat designed to help you manage your home heating.

Turn your fire on and off with a Proflame remote control. The Proflame can be used as a thermostat, allowing you to set and automatically maintain a desired temperature.

A Regency wall thermostat is a hands free solution to maintaining a constant temperature in your home. Choose the programmable wall thermostat and set different temperatures throughout the day to match your lifestyle. Wake up to warmth!
