Resolution on the Commitment for the Use of Data to Guide Municipal Management

Whereas, the management of modern cities has evolved over time,

And whereas, there is a greater reliance on technology and new thought in the management, operations and development of policies and programmes throughout cities across the world,

And whereas the use of data is at the heart of all municipal management systems for over 92% of Major Cities across the world particularly as it relates to engineering projects and critical social programmes,

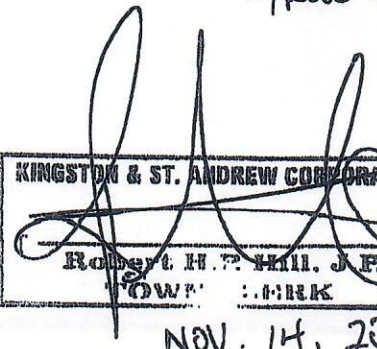

Be it resolved, that the Kingston and St. Andrew Municipal Corporation makes a firm and irreversible commitment to use all forms of relevant data to assist in managing our operations and guide in policy development as a means of better tracking our progress and better serving our citizens,

And, be it further resolved that this Resolution be circulated to the Ministry Local Governance and Community Development and all Municipal Corporations for support.

Moved by: Councillor Otis Hamilton

Seconded by: Councillor Artnell McDonald
