Nearly 95% of all serious traffic collisions are due to human error.¹ And though drivers are an organization’s most valuable asset, monitoring and managing driver risk is a critical need for fleet managers. Until now, fleets have lacked full context and visibility into driver behavior — severely limiting managers’ ability to identify high risk events and the drivers that need immediate or additional coaching. VERA 3.0® changes that dynamic for good.

Nauto’s Visually Enhanced Risk Assessment (VERA) summarizes all driving events and behaviors into one score and provides a simple way to keep track of your drivers’ safe driving over time. Calculated on a per-trip basis, a VERA score ranges from 1 to 100, with 100 being the best — and safest — driving performance.

Nauto tracks and analyzes over 20 variables to provide fleet professionals with a comprehensive safety evaluation and scorecard. This holistic approach offers unprecedented, granular detail, per driver and across a fleet, empowering organizations to better assess fleet risk, reduce behaviors that lead to collisions, and lower costs.

Nauto® is the only real-time AI-powered Driver and Fleet Safety Platform able to help predict, prevent, and reduce high-risk events in the mobility ecosystem. By analyzing billions of data points from over 1.1+ billion AI-analyzed video miles, Nauto’s machine learning algorithms continuously improve and help to impact driver behavior before events happen, not after. Nauto has enabled the largest commercial fleets in the world to avoid more than 70,000+ collisions, resulting in nearly $310+ million in savings.

Nauto is located in North America, Japan, and Europe. Learn more at nauto.com or on LinkedIn, Facebook, Twitter and YouTube.
