

Advanced Event Details

NAUTO MANAGER-LED COACHING

As a fleet professional, it's your responsibility to understand what's going on with your drivers while they're on the road. You need to know about risky behaviors — and you need relevant detail when an incident occurs. After all, you can't improve fleet performance without complete visibility. With its Advanced Event Details screen, Nauto offers a comprehensive synthesis of all data points that will help you to recreate what occurred when risky driving behavior or a collision is detected.

WHAT INFORMATION DOES THE ADVANCED EVENT DETAILS SCREEN PROVIDE?

At a glance, fleet managers get a **full understanding of every risk event** to inform driver management and aid in coaching sessions, as well as **complete context** to expedite the claims management process.

The Advanced Event Details screen provides video footage, a time-sequenced overview of the event, and key data points.

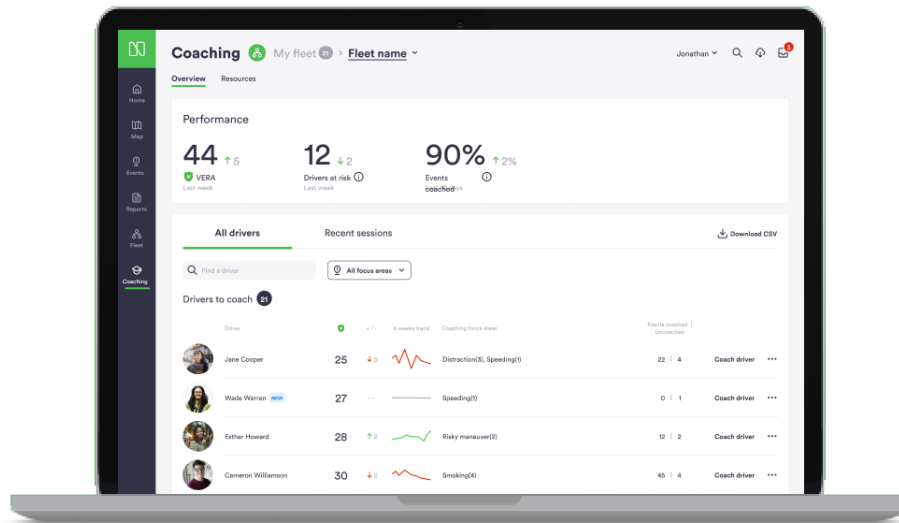

- > Trip details (including driver, vehicle, location, time and date)
- > Video footage
- > Time sequence of the event
- > Map View
- > Incident report
- > Speed
- > G-force (average across event)
- > In-vehicle alerts
- > Driver state (such as distracted, tailgating, and hard brake)

The screenshot displays the Nauto Advanced Event Details screen for a collision event. The interface includes a sidebar with navigation options: Home, Map, Events, Reports, Fleet, and Coaching. The main content area is titled "Collision HIGH" and shows a video clip of a truck collision on a road. Below the video, there is a timeline of the event with markers for "G-force", "Speed", "In-vehicle alert", and "Driver state". The "Trip details" section provides information about the location (443 River Rd, Highland Park, NJ 08904), the driver (John Edwards), and the vehicle (John Edwards's vehicle). The "Incident report" section includes details about the collision, such as the vehicle's direction (Forward) and the damage (Minor scratch or dent). The "Driving conditions" section shows the road type (Normal road), weather conditions (Clear), and road conditions (Dry). The "General tags" section lists various tags like "City street", "None", "Hard brake", "Minor", and "Attentive".

INTEGRATING YOUR MANAGEMENT, COACHING, AND CLAIMS WORKFLOWS

Nauto's Advanced Event Details is a foundational element of effective fleet safety management. With a complete breakdown of every risk event, fleet managers have everything they need to target and fine-tune coaching sessions.

Together with Nauto Manager-Led Coaching Workflows, the Advanced Event Details screen also enables you to track and document driver performance and progress — and consolidate all valuable driver information in one place — so your driver data isn't siloed across multiple systems.

Finally, Advanced Event Details helps you expedite the claims management process, saving both time and money. When a collision occurs, you can review comprehensive event details and utilize the Incident Report for accurate and timely insurance notification.

Nauto® is the only real-time AI-powered **Driver and Fleet Safety Platform** able to help predict, prevent, and reduce high-risk events in the mobility ecosystem. By analyzing billions of data points from over 1.1+ billion AI-analyzed video miles, Nauto's machine learning algorithms continuously improve and help to impact driver behavior before events happen, not after. Nauto has enabled the largest commercial fleets in the world to avoid more than 70,000+ collisions, resulting in nearly \$310+ million in savings.

Nauto is located in North America, Japan, and Europe. Learn more at nauto.com or on [LinkedIn](#), [Facebook](#), [Twitter](#) and [YouTube](#).
