

Cyber Vulnerability Scan

Camargue

In line with Camargue's M³ philosophy of managing, mitigating and migrating critical business risks, you also have access to various risk management services in addition to your insurance coverage.

What is the Cyber Vulnerability Scan ("CVS")?

A vulnerability scan is an inspection of the potential weaknesses in the security of a computer network. This allows you to remedy the flaws before they are discovered by someone else who might attempt to break in. Think of the CVS as checking your locks, alarm and motion detectors at your home or office. Computer network vulnerabilities arise from inestimable sources, which are constantly changing, such as errors in software programming, utilising outdated software or hardware, poorly configured firewalls, and lack of, or weak, passwords.

The CVS only requires the details of your externally facing internet protocol ("IP") addresses, in order to examine for known vulnerabilities. Therefore it sees only what an outside intruder would see (like your locks, alarm and motion detectors) and tests the perimeter security – with no work required by you.

A report is produced which categorises and ranks the results according to severity. It is then crucial that you consult with IT specialists to resolve the vulnerabilities. Remember that the CVS tells you that your lock is broken, the critical step is then to repair it.

The CVS is offered on a once-off or monthly basis. It is highly recommended that you opt for monthly scans, as vulnerabilities and cyber attacks are continuously evolving.

How do you access the CVS?

All of Camargue Underwriting Managers (Pty) Ltd policyholders, as well as any broker who has a valid agency agreement with Camargue, may access the complimentary CVS risk management service.

In order to utilize this service, please complete the Cyber Vulnerability Scan Consent Form and email it to: camargue@camargueum.co.za – don't forget to copy in your broker.
