

# DISCO Request

*Automated legal response compliance*

*DISCO Request automates response compliance for legal requests such as SOPs, subpoenas, and law enforcement requests, giving legal teams control and visibility from intake to resolution – all from a single, easy-to-use platform.*

## ***With DISCO Request***

- 👍 Reduce time spent managing requests by 75% over a manual process
- 👍 Get unified context for all of your requests in a single system of record
- 👍 Acknowledge, intake, route, respond to, audit, and archive requests – all from a single, cloud-based interface
- 👍 Get your team up and running in minutes in an easy-to-use platform
- 👍 Demonstrate an immediate return on investment (ROI)

## ***Never again***

- 👎 Spend hours managing each request
- 👎 Risk non-compliance due to leakage, errors, or lack of visibility or auditability
- 👎 Toggle between legal mailboxes and systems to manage requests
- 👎 Frustrate your team with clunky workflows and cumbersome technology
- 👎 Hire more people to manage increasing workloads

## Designed for modern legal teams

### *Automated request triage*

Automatically classify incoming legal requests like subpoenas and service of process requests by type and route to the right team member with round-robin assignments by percentage of workload

### *Hosted legal request forms*

Accelerate request intake, routing, and response with fully hosted forms in multiple languages for legal requests like law enforcement requests, civil process, and emergency data requests

### *Easy to use*

Purpose-built for law enforcement and subpoena response teams

### *Cloud integrations*

Automated connections to registered agents, archives, and e-fax solutions enable fast response by email, secure link portal, HelloFax, or SendSafely

### *Defensible response compliance*

Complete audit logs, reports, and response delivery via a secure link portal ensure compliance with legal response requirements

### *Unlimited users and requests*

Predictable, flat-fee pricing accelerates adoption as a system of record and knowledge management

### *Easy to deploy*

No-code, self-service integrations reduce the burden on IT resources

### *Automated integrations*

#### Registered agents

#### SSO

#### Enterprise productivity

### *Complete centralization*

Maintain a single source of truth for all workflows, playbooks, and updates in a single, cloud-based interface

### *Made-for-legal workflows*

Intuitive workflows for intake, routing, acknowledgment, drafting, response, and archiving boost productivity by up to 75%
