

## Meltemi Total Return Investment Portfolio — MTRIP<sup>®</sup>

Issued by Meltemi Investment Management Limited ('Meltemi') pursuant to section 21 of the Financial Services and Markets Act 2000

## Background and description

Stretching back a few decades, major equity markets such as the US and Europe have enjoyed about a 3.5% premium over their risk-free interest rates. Active asset allocation and security selection may generate higher returns. A portfolio simply growing at only 7% per annum will double in value over ten years.

MTRIP is an individually managed discretionary investment portfolio. The portfolio strategy is to make long-only investments in global equities, bonds, and precious metals. Occasionally, to hedge or to enhance investment returns it may sell 'covered call options' and 'put options'.

## Investment objectives

Aims to generate superior returns — typically 3%-5% before investment management fees, above the one-year deposit rate of the reference currency of the portfolio over a business cycle, with less volatility than global equities.

However, there may be extended periods of negative or lower than deposit-rate investment performance. Occasionally the portfolio may even experience a partial loss of the capital and an investor may not get back all of the capital invested.

## Structure

The Investment Manager for the MTRIP is Meltemi Investment Management Limited ('Meltemi'), a UK registered company, authorised and regulated by the Financial Conduct Authority (FCA) in the United Kingdom. The principals of the firm have a successfully managed funds for wealthy individual clients over decades.

We facilitate our clients in opening their accounts at some of the premier international banks; Bank Julius Baer & Co. Ltd and VP Bank (Schweiz) AG, Zurich. The bank will then act as a custodian for the client's assets. The client will also grant power over this account (discretionary portfolio management) to Meltemi to execute the MTRIP investment strategy, as described below.

The custodian bank will maintain all primary records of investments and will provide trade confirmations, valuations and any other information about the portfolio directly to the client with a copy to Meltemi for it to be able to manage the portfolio. Meltemi will send a quarterly portfolio review to its clients.

## Investment strategy, portfolio construction and risk management

### 1. Asset allocation

We regularly follow macroeconomic fundamentals and market dynamics of more than 30 countries, sometimes with the help of external economic advice.

This helps us determine a framework against which we constantly monitor and readjust country and asset allocation between cash, bonds, equities, currencies, and any hedging.

### 2. Equities — maximum up to 75%

- > Identify 'growth' companies or companies benefitting from the business cycle and which fit the in-house 'buying growth cheaply' philosophy.
- > Select equities-based country and sector ETFs benefitting from cyclical and structural economic growth.
- > Allocate a small portion of the portfolio to contrarian situations whereby a company, a sector or a country has gone through some turmoil but is showing signs of recovery.
- > A maximum of 5% of the portfolio could be invested in a single equity and a maximum of 20% in a single ETF at the time of purchase.

### 3. Bonds

- > Invest part of the portfolio in liquid government and corporate bonds issued in major currencies with five years or less remaining life. Select liquid ETFs of such bonds managed by reputable service providers. Such ETFs, however, may contain bonds with more than five years remaining life.
- > A maximum of 10% of the portfolio could be invested in a single bond, unless the issuer is a G7 Governments when the limit of investment may exceed 10%, and up to 20% in a single ETF.
- > Exposure to below investment grade or non-rated bonds and related ETFs will be limited to a maximum of 40% of the portfolio value.

### 4. Hedging

Depending on our economic and market views we may partly or fully hedge the non-reference currency exposure of equities and bonds by selling forward FX contracts of the relevant currency by buying 'inverse' ETFs or any other appropriate financial instrument ('the hedge'). The hedge may not exactly match the characteristics of the investment being hedged.

### 5. Options

We may sell 'covered call options' on equities and earn a premium to enhance the returns on the portfolio. We may also sell 'put options' and earn a premium to enhance the returns or to buy equities at a cheaper level. The total exercisable amount of 'sold' put options will not exceed 100% of the portfolio value. Also, the market value of all outstanding short put options will not exceed 10% of the portfolio value. All options will be 'exchange traded' options. All options will be 'exchange traded' options.

\* Compound annual growth rate

\*\* Volatility risk adjusted returns

\*\*\* Investment performance after all estimated fees and expenses.

\*\*\*\* Most common theme of hedge funds included in this index is to take long and short positions in different stocks simultaneously. Though this approach limits the overall systematic stock market exposure, some exposure typically remains. These funds generally exhibit higher volatilities and higher correlations to standard directional benchmarks of equity, bond market and hedge fund industry. (Source: HFRX)

### Important information

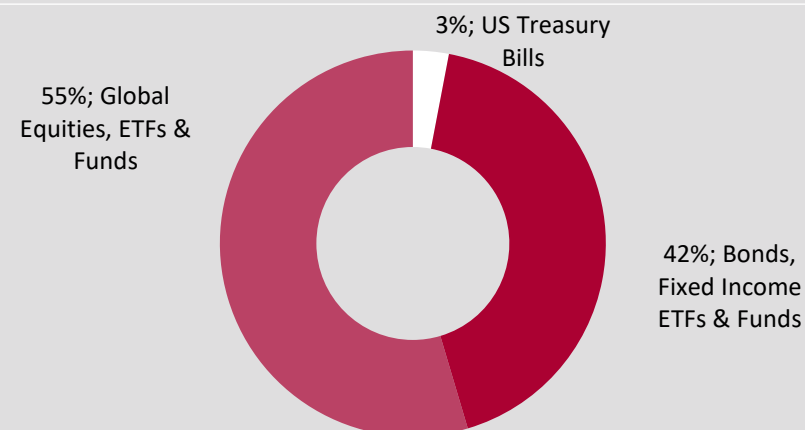

Past performance is not a guide to future results, real results may vary. The value of investments and the income from them can go down as well up. The portfolio may hold investments that are not guaranteed or insured by anyone and are subject to investment risk. An investor may not get back the full amount originally invested.

Exchange rate changes may cause the value of an overseas investment to rise or fall against the reference currency.

Investors should be aware that investment in derivatives, for example forward foreign exchange contracts and options involve an above average degree of risk due to the geared nature of these instruments.
