

PODIMETRICS

Podimetrics at a Glance

Podimetrics is a virtual care management company focused on keeping our most vulnerable patients healthy at home. We do this by helping reduce the severity of diabetic foot ulcers (DFU) and the associated costs in your highest-risk population.

Podimetrics helps reduce the DFU severity and associated costs in your highest-risk population

*“Diabetic foot ulcers were the biggest cost we didn’t know we had.”
- National Health Plan Executive*

Podimetrics FDA-Cleared SmartMat & Care Support Solution

- Leverages thermometry, long-standing clinical guideline to prevent DFU
- Once-daily remote temperature monitoring, with an easy-to-use design
- Care Support services that are flexible in design to accommodate established care models
- Podimetrics detected 97% of plantar DFU over 5 weeks prior clinical presentation⁵
- 75% of patients are still fully adherent at 12 months
- Demonstrated 91% reduction in severe ulcers and 100% elimination of major amputations⁴
- Observed 52% reduction in *all-cause* hospitalizations⁴

The Podimetrics Solution

Using our SmartMat and care support services, Podimetrics remotely monitors patients' feet, and alert clinicians when preventative clinical action is needed.

Advanced Technology

PodimetricsSmartMatTM

- Easy-to-use, in-home floor mat for remote monitoring of plantar foot temperature for signs of inflammation
- The Podimetrics SmartMat detected 97% of diabetic foot ulcers on average five weeks before clinical presentation.¹

Care Support

Clinical Partnership

- Ensures that patients are engaged and connected with their provider for preventative care
- Scalable and flexible in design, our team can seamlessly integrate into existing Care or Disease Management Programs to augment cohesive care.
