

## AuthentiCare® Data Aggregator

The AuthentiCare Data Aggregator supports the import of visit data from external sources into the AuthentiCare platform.

The AuthentiCare Data Aggregator provides unified statewide reporting, custom file layout design, and visit data processing. It is the interface engine that collects visit data from third-party Electronic Visit Verification (EVV) systems and feeds that information into the AuthentiCare platform. This feature provides an open specification for all third-party software providers to integrate with the Aggregator.

**Visit data can be securely transferred to the AuthentiCare platform through the following methods:**

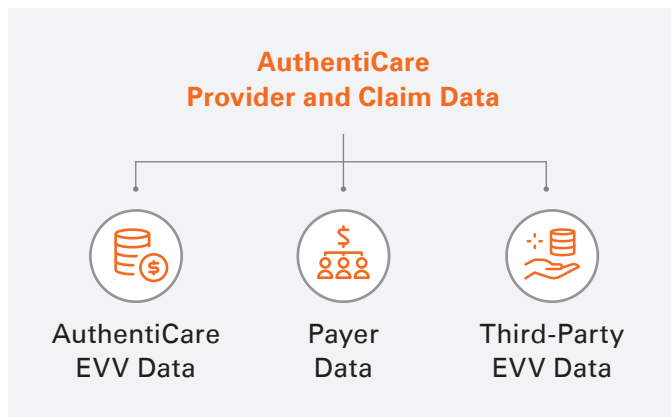

- Web Portal
- SFTP File Gateway
- APIs

A differentiating feature of the AuthentiCare Data Aggregator is the File Layout Designer (FLD). The purpose of the FLD is to provide users with the flexibility to submit using an existing file layout from their EVV system rather than creating a new one just for AuthentiCare.

AuthentiCare Is a Powerful Platform with a Configurable EVV Solution That Will Ensure Compliance and Improve In-home Patient Care.

- Connected platform standardizes data across third-party EVV systems
- Requires little to no training or investment – home healthcare providers can continue using their existing EVV systems
- Unified reporting and data, and real-time communications
- Supports visit records billed through third-party EVV billing systems

Fiserv AuthentiCare® platform brings the expertise and help you need to retain funding, reduce costs and improve patient care. Supporting compliance with the 21st Century Cures Act, this multi-device solution offers automatic claims and billing, real-time reporting, data aggregation and more.

## The AuthentiCare Platform Provides State Agencies with the Following Benefits

-  Data Collection
-  Data Aggregation
-  Secure Data Transfer
-  Custom File Layout Design
-  Real-Time Data Transfer
-  Business Intelligence
-  Multi-Channel and Unified Reporting
-  Maximum Oversight and Visibility
-  Workflow Claims and Data Accuracy
