

Sanifos® 110 - Sewage Lifting Station

Our Expert Solution

Dealing with waste can be a complex task when planning off-grid accommodation as no two sites are quite the same. The client contacted our team for guidance, unsure of the best waste solution for this shepherd's hut application.

During the consultation period it was discovered that there was an exposed mains sewer within 130 metres of the hut. We arranged a joint site visit with long-term partner Saniflo to look into an automated solution to pump away waste.

As the client was more than happy to carry out the (minimal) groundworks for the right, long-term solution, we suggested the **Sanifos® 110 sewage lifting station**. Set into the ground next to the hut and accepting all the hut's liquid waste, the Sanifos® 110 provides a discreet and automated waste management system: an internal float switch turns on the unit to grind/macerate and pump waste away through underground pipework to the sewer (suitable permissions were obtained).

TESTIMONIAL

Michael & Hannah

"We have been living here for just over a month now and the pump seems to be working really well. It's a seamless system, thanks for all your help. Really appreciate what you did for us sorting it out."

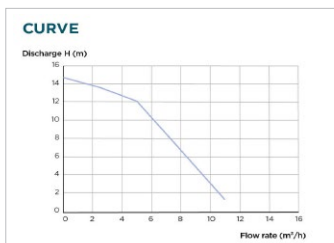

Collects all waste from hut

Sits discreetly underground

Pump is activated automatically

Empties into mains sewer
