

Electric Powered

# FORCED CIRCULATION PRE-HEATER

The Forced Circulation Pre-heater offers a highly effective heating power for processes with water or oil. With the mounted control cabinet and integrated high-quality centrifugal pumps we offer configurable units which can be used for countless applications.

Specific models and configurations are available on request.

## Function

The Forced Circulation Pre-Heater features integrated pumps to move heated coolant or oil throughout the engine, resulting in superior overall heating performance. Continuous circulation ensures heated fluid is kept at a more consistent temperature.

## Applications

Power Generation  
Hazardous location  
Railroad  
Marine  
Heavy Equipment  
Oil and Gas

## Features

Pre-packaged unit  
Plate-mounted  
Also available in weathertight or hazardous location  
Contains contactor, transformer and fuses for the pump  
Simple integration into existing control system with remote automatic function and customer interface connections

## Benefits

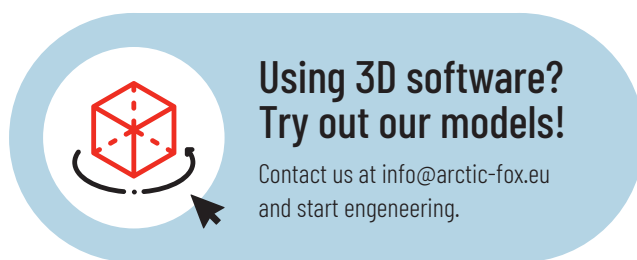

Ensures a more evenly heated engine  
Prevents condensation  
Reduces emissions and improves energy efficiency  
Reduces maintenance on plumbing  
Ensures heated fluid is kept at a consistent temperature
