## GAME DESIGN GUIDE

## GRIDOPOLIS

## A 3D Tabletop Game \& System

This Game Design Guide works better if you have already played Gridopolis

SEVEN BASIC PARTS. UNLIMITED CREATIVE PLAY!

## Why game design?

Game-based learning has tremendous advantages and can teach a powerful mix of logic, strategy, creativity, and critical thinking.

The Gridopolis Game Design Guide offers each of these benefits - all within a fun, social and screen-free environment.

Students can design their original games solo or in groups.

During the testing phase [section 6 / page 12] students play their game with others.

## Knowledge Objectives

Students will practice planning, strategizing, and playing in three dimensions.

Skills to be addressed:

- Visualization in 2D and 3D
- Creativity \& concentration

Strategy

- Critical thinking
- Logic \& planning

## Behavioral Objectives

Students collaborate as they communicate their rules. They work individually and play in competition.

Skills to be addressed:

- Socialization
- Negotiation
- Communication
- Cooperation \& Collaboration

## Assessment Activities

After the game design is completed ask students about their experience:

- Designing their own game
- Playing in three dimensions

What are examples of things that have different dimensions?

- 1 dimension [line, string]
- 2 dimensions [window, paper]
- 3 dimensions [box, apple, house]

How is a three-dimensional game more challenging than a twodimensional game? How is it easier? Encourage students to explain their reasoning.

Design your grid-set

Place player markers \& nodes

Choose how markers move

Pick a capture method

## Select a 'win' condition

Test as many times as needed

## Important reminders

## KNOW THE RULES

This Game Design Guide requires that you have previously played Gridopolis and understand the Original Rules. Use the instruction manual from the game box.

You can also download the instructions - and more free grid-set blueprints - at www.gridopolis.info.

## BREAK THE RULES

The examples in each section are suggestions to help you get started.

This game design is your original creation, so feel free to substitute any rule or idea you like better!
Just document it in the Game Design Checklist on pages 13 \& 14 .

## Introduction

Gridopolis is a 3D strategy game that allows you to get creative and design your own original game!
Using this Game Design Guide, you can change the game's design \& rules as much (or little) as you choose.

When designing, some unique features of Gridopolis to keep in mind are:

- It's played in threedimensions, instead of two.
- You can add to or subtract from the grid-set during play!

DESIGN TIP > Wherever you see
this green icon, record your idea in the Game Design Checklist on pages $13 \& 14$.

## What should I know?

This guide is based on knowledge of Gridopolis and its rules. The best way to learn is to read the instructions and play a few games first!

In each box you get 217 parts:

## PLAYER PIECES

- 24 Markers (4 colors)
- 6 Teleporters
- 8 Blocker-Boxes

## Design process

Designing a game is not a linear process. Your first draft will not be your final design.
As you work through the steps of this Game Design Guide, each decision you make affects other decisions - both before and after.

Be flexible! Feel free to go back and forth in any order with your design ideas.

## QUESTION TIME

- What are your favorite games?
- What rules or features do you like most about them?
$\qquad$
$\qquad$

## How many players?

Typical strategy games are played by two to four people.

One box of parts allows for up to four players. Your game design can vary from two to four players.

When deciding the number of players for your game, design the grid-set so all markers have room to move.

A good ratio of occupied to empty spaces is 40/60.

That means you should target $40 \%$ occupied pads (with markers) and 60\% empty pads (for moving around).

DESIGN TIP > Take a few photos from different angles.

## What's your design?

Since Gridopolis is threedimensional, start by building multiple levels.
When choosing how many levels to build, try to promote movement everywhere.
This is the Twisted Tower grid-set design.
It's a two-player game with each player getting four markers.
You can download the building instructions, called blueprints, at www.gridopolis.info

DESIGN TIP > use an odd number of levels and start players on the middle level.
This creates more action in the center and movement throughout the grid-set.
(If players start on the top or bottom level, there will be less movement and gameplay action.)

Should you design a totally flat grid-set, then give each player more structural parts (pads, posts \& links) and create a game focused on building!

## Any extra parts?

In Gridopolis (Original Rules) each player starts with ten extra parts.

- 3 Pads
- 2 Posts
- 3 Links
- 2 Blocker Boxes

Before gameplay begins, decide how many parts (if any) are given out to players.

If you design a smaller grid-set, then you will have more building parts for players to use during the game.

DESIGN TIP > The ability to add to and subtract from the grid-set makes gameplay more dynamic! (Hint: use the extra parts for building.)

## Aim for symmetry

Symmetry is not required, but it will
make your grid-set easier to build. Design your grid-set so all players have equal room to move their markers.

Symmetry helps make things fair. Each player should start an equal distance from a set location - like the center or edge - of the grid-set.

EXAMPLE >
This design is symmetrical because it looks the same on both sides.
(It's also
symmetrical in another direction!)

## PERSPECTIVE

## Assign player markers

In Section 1, you selected how many people were going to play. Now, determine how many markers each player will get.

In Gridopolis (Original Rules,) each player has six markers. You can choose any number from 1 to 6 .

SUPER TIP > If you own two sets, you can combine them and have up to 12 markers per player. That's double the fun!

## Place teleporters

OPTIONAL / SAME AS ORIGINAL RULES

Place teleporters on your new grid-set design. These should be somewhere central, where they are equally spaced from all players Place two to six.

## How do you start?

Start with your markers $\mathbf{O N}$ the grid set (like most games).

Try to arrange markers so that everyone's starting positon is an equal distance from each other. If you use Gridopolis (Original Rules,) place kingerizers on pads underneath the markers. These are your opponent's objectives.

B Start with your markers OFF of the gridset.

OPTION In this case, your first move will be to place a marker on an open pad.

C
Do you have another idea? Great!

OPTION you examples, but feel free to try
OPTION you examples, but feel free to try anything! Use the Checklist (pages $13 \& 14$ ) to record your choices.

## 1 pad: no backwards

Pawns move one pad per turn as long as they do not go backwards.
OPTION This includes vertically and diagonally.

This is the same as Gridopolis (Original Rules).

## 2 pads: straight line

INTERMEDIATE DIFFICULTY

(B) Pawns move two pads, but only in pads on the same level, multiple levels, or diagonally.

If you hit 'the end' of the grid-set (the top, bottom or outer edge) then you are allowed to stop moving after one pad.

## 2 pads: mixed move

most advanced difficulty
Pawns move two pads, one straight AND one diagonal. You can do this in

OPTION
In other words, you can either move straight then diagonal OR diagonal then straight.

## 1 pad (same as pawn)

EASY DIFFICULTY
A
OPTION Move only one pad per turn.

## 2 pads: $90^{\circ}$ turn

INTERMEDIATE DIFFICULTY
B Move two pads, but the second move cannot be diagonally.
OPTION
The first move is allowed in any direction; the second pad must be at a right $\left(90^{\circ}\right)$ angle from the first.

## 2 pads: diagonal turn

most AdVanced difficulty
(C) Move your marker two pads but only

OPTION The line can be two adjacent pads on the same level, multiple levels, or diagonally across multiple levels.

## Jumping capture

EASY / SAME AS ORIGINAL RULES

Jumping over an opponent to capture them is common in strategy games.

OPTION It also allows for multiple jump opportunities, and is exactly how gameplay works in both Checkers and Gridopolis (Original Rules).
To capture a marker, you jump over them - in a straight line - on to an empty pad.

## Landing capture

EASY DIFFICULTY

B
OPTION opponent by landing on top of them. In this method, there is no possibility for the multi-jump move.

## Surrounding capture

INTERMEDIATE DIFFICULTY

Capturing can also be done by the 'surround' method. You capture your opponent by trapping them between two of your markers.

## No capture (it's a race)

DIFFERENT DIFFICULTY

OPTION As in Chinese Checkers, there is no capturing, only jumping. The game is a race to see who can get their markers to the other side and back again - before anyone else.

In this option, each marker needs to get to their opponent's kingerizer to get kinged. They can then move twice in a row and in any direction (like Gridopolis Original Rules).
They then need to get back to their own original home row. Once there, they exit the game, and are removed from the grid-set.

Finally, decide how many markers need to accomplish the goal. If you start with six markers, maybe only three need to accomplish this goal.

## Timed game

DON HAVE ALL DAY, YOU KNOW?

OPTION

A timed game is great for classroom use when time is limited or when new players are learning the rules.
You will need to determine a point scoring system to use when time expires.
Here's the Gridopolis scoring system with original rules:

- Kings you captured $\qquad$ 4 points
- Pawns you captured $\qquad$ 3 points
- Kings you have left ............ 2 points
- Pawns you have left ......... 1 point

You can also create your own scoring system!

DESIGN TIP > Determine your own point system or use the one above.

## Last player standing

the traditional way to play
B With enough time, the 'last player standing' is a great way to determine a winner. Keep playing until only one player is left in the game.

## Grid-blitz!

CAN YOU HANDLE THE PRESSURE?

C

OPTION
Inspired by the high-speed chess style of the same name, you pick a short amount of time for each player to take their turn.

If players cannot decide upon a move in time, they forfeit their move! This makes the strategy shift from taking the best available move to avoiding the worst available move.

If you don't have a timer, you can use one of the free 'chess-clock or -timer' apps on your mobile device.

## Capture the flag

A MORE RELAXING WAY TO PLAY

Decide upon a specific destination to reach. This can be the opponent's home row (where the kingerizers
OPTION are located) or anywhere else you choose. Then determine how many markers need to reach it.

## Play a game!

This sound obvious, but the only way to test a game design is to play it!

First, explain your rules in a logical sequence to help others learn how to play.

## DESIGN TIP

If no one is around, try this trick used by the designers of Gridopolis: play against yourself, alternating turns to play as all players in the game!

That works better than you might expect. You can spot obvious problems right away and then fix them before you play-test with others.

## DESIGN TIP

\{NEW

Are things not working? Pull it all apart and try again. Trust your intuition!

## Best practices

The best way to help others learn a new game is to keep the rules simple and familiar.

Remember, each rule can affect other rules. Play-test enough times to be sure everything works the way you planned.

Always try to avoid a 'stalemate' situation. This happens when two opponents are tied with no clear advantage.

Gridopolis limits this problem by having extra parts to build, using teleporters to move, and giving kings two moves per turn.

Use these ideas or test something new you think works better! When using the Checklist (pages $13 \& 14$ ) feel free to use any other ideas.

## Share it!

Have you created an amazing new game? Then share it!

The best way to determine if your new game design has potential is to let other people try it out.

To submit your ideas, post your photos and checklist (pages 13 and 14) on social media and tag us using @gridopolis.

## DESIGN TIP

Use the Game Design Checklist on pages $13 \& 14$ to explain your game design \& rules to others.

## 1 Designing

How many people can play? Choose between 1 and 4

Take photos of your design at the beginning, middle, and end of a game.
Do you have extra parts? Show in the beginning photo and list below.
2) Starting

How many markers does each player receive? Choose between 1 and 6 .

OR

Start OFF the grid-set

Another (a hybrid) way to start:

## 3 Moving: pawns

How many pads do you move on each turn?

If you move more than one pad, Do you go straight?

Do you turn? If yes, how?
$\qquad$
$\qquad$
$\qquad$

Do pawns have restrictions?
YES. Pawns cannot move backwards, unless they've been 'promoted' to a king.

NO. Pawns can move in any direction at any time.

## 3 Moving: kings

How many pads do you move on each turn?

If you move more than one pad,
Do you go straight?
Do you turn? If yes, how?
$\qquad$

Do kings get special benefits?
YES. Kings can move twice in a row, in any direction.

NO. Kings move only one pad at a time, but in any direction.

Other details on how kings move:

## 4. Capturing pick only one

Jump over your opponent.
As seen in checkers.

Land on top of your opponent. As seen in chess.

Surround your opponent. As seen in Othello.

No capturing! Its a race to the finish line. As seen in Chinese Checkers.

Another way no one has ever thought of! Specify below.
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Another scoring system:
$\qquad$
$\qquad$
$\qquad$

Grid Blitz!
A hyper-speed game
A timed game with points.
Use the scoring system listed below.

- Kings you captured .......... 4 points
- Pawns you captured ........ 3 points
- Kings you have left ........... 2 points
- Pawns you have left ......... 1 point
Winning
PICK ONLY ONE

Last player standing
Winner is the last player left.
.. continued next column

5 Winning pick only one
Capture the flag
The first one to complete a course or the objective listed below wins.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
? Anything else?
List any rules you created that were not covered in the prior sections.
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Our story

Gridopolis is a different kind of game company.

The original, simple idea to make a 3D strategy game has evolved into a robust system of new games and game-playing methods.

The game that exists today is the result of a three-year design, development, and user testing effort. That effort is still ongoing and will continue.

If you are interested in expanding the use of Gridopolis in a learning environment, please reach out. Write to info@gridopolis.games
