MC3 CARDIOPULMONARY ANNOUNCES DISTRIBUTION AGREEMENT WITH MEDTRONIC INC. FOR GLOBAL SALES OF SOFT-FLOW® ARTERIAL CANNULA

DEXTER, MICHIGAN – NOVEMBER 15, 2016

MC3 Cardiopulmonary announced today a distribution agreement with Medtronic giving the global healthcare company exclusive worldwide distribution rights to MC3's Soft-Flow arterial cannula globally.

The partnership will mean the return to market of the world's first diffusion tip arterial cannula, which enables caregivers to provide gentle perfusion of the aorta during cardiopulmonary bypass procedures.

"Soft-Flow was once the top-selling arterial cannula in the United States and it remains a favorite among surgeons and perfusionists nationwide. We are very pleased to have this opportunity to partner with Medtronic to bring Soft-Flow to the global market," said Scott Merz, President and CEO of MC3 Cardiopulmonary. "Medtronic's established depth in the cardiovascular market will help ensure outstanding product distribution and support for a surgical community ready to put this important cannula product into use."

Soft-Flow, the first product launch for MC3 Cardiopulmonary, is expected to be followed by a portfolio of new products designed to support patients with cardiopulmonary dysfunction. This aligns with MC3's mission to serve the global community by creating life restoring medical devices that address acute and chronic unmet cardiopulmonary clinical needs.

About MC3

MC3 Cardiopulmonary is a fast growing medical device company located just outside Ann Arbor in Dexter, Michigan. Its mission is to serve the global community by creating life restoring medical devices that address acute and chronic cardiopulmonary clinical needs.
