

SpeedSafe reports on vehicle speed with respect to **Posted Speed Limits** and enables **Fleet Managers** to build safer fleets

All GPS systems will claim a basic speeding alert feature. Azuga SpeedSafe goes beyond traditional speed control technologies by bringing context (“Where was the driver speeding and what was the posted speed limit?”) and analysis (“Is the driver doing better than last week?”).

Azuga SpeedSafe solutions help fleet operators identify high-risk driving behavior, control speed and monitor, rank and rate drivers on all types of roads in the US and Canada.

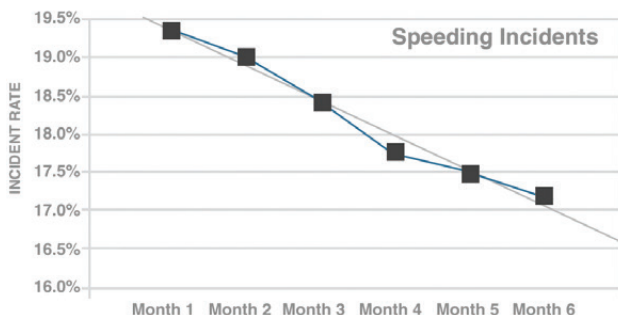

Excessive speed is a major factor in 30 percent of fatal truck accidents and is a leading indicator of other types of poor driver behavior. Speed related crashes result in nearly 1,600 deaths and \$6 billion in lost productivity in the U.S. each year. Excessive speed is also a leading contributor to poor fuel economy and vehicle maintenance costs.

WITH SPEEDSAFE

A fleet manager can observe speeding on residential streets, in school zones, and in adverse weather conditions. Going beyond simple control, with SpeedSafe a fleet manager also gets reporting and analytical tools to quickly identify problem areas and correct these habits over time. Trials have demonstrated that SpeedSafe can reduce excessive speeding and significantly reduce expected accident rates.

Azuga Speed Safe in combination **Azuga DriveSafe** (preventing texting and calling when vehicle is in motion) provides a comprehensive solution for fleet managers who are concerned with reducing driver risk and improving safety.
