

a Bridgestone Company

Driver ID cards easily identify the drivers and occupants in your pool of vehicles.

Bluetooth beacon cards—the easy, no-touch way to identify the drivers and occupants in your fleet vehicles.

Perfect for fleets with open vehicle pools, Azuga's bluetooth beacon driver ID cards make it easy to identify who is behind the wheel when your vehicles are being driven. Drivers simply carry the ID card in their wallet—no other device or user interaction is needed. The card automatically pairs with the Azuga tracking device, and the driver's identification is attached to the activities and driving behaviors recorded in Azuga Fleet.

Have multiple beacons in one vehicle? A driver can easily pair to the vehicle by pressing the button on the beacon card to claim the trip.

Card specifications:

Size: 3.37" x 2.13" x 4.2mm (3 credit cards stacked)

Range: 10-15 meters **Battery:** 5 years

EASY DRIVER IDENTIFICATION

Each driver is assigned a card that communicates a specific ID number so Azuga can report who is driving.

HASSLE-FREE PAIRING

Drivers simply carry the bluetooth ID card. It's read automatically by the Azuga tracking device. Button-press feature to identify the actual driver in situations where multiple beacons are present.

BETTER MANAGE YOUR FLEET

With drivers paired to vehicles, you'll know who's driving which vehicle and how to interpret data on activities and safety events.
