Restating the problem

The data already exist, but

- What data is available
- Where is it
- Who has it
- How can I get it

Why focus on long-range?

The Norwegian problem:

- Norway has 97 746 km of public roads
- Large parts of the road network lack easy access to good infrastructure like power and fiber

The long-range solution:

- Massive coverage
- Sustainable business model
- “Free”
- Already built in to all modern cars
