OUTPUT SPEED SENSORS

Whether there is a bad internal connection, a bad seal or a simple crack from over-tightening, the last thing a technician wants to see is a customer bringing a vehicle back in limp mode. In response to the industry's need for a dependable solution to faulty speed sensors, Raybestos® Powertrain developed an output speed sensor that is superior to the OE. Our patent-pending design is completely impervious to moisture, as all internal components are fully supported and protected from outside contaminants.

RECOMMENDED USE:

All automatic transmission rebuilds.
