

TECHNOLOGY & PROCESS ANALYSIS (TPA)

Accelytics' Technology and Process Analysis (TPA) is a deep-dive study to help clients determine how to optimize their supply chain, sales, financial and retail planning processes to gain a competitive advantage, improve the bottom line and run more efficiently.

In as little as two weeks, Accelytics can identify how clients can plan their business operations more effectively, develop technology requirements necessary for process improvement and create a cost justified roadmap for change.

WHAT TO EXPECT

With the TPA, Accelytics has helped numerous clients, across all verticals, gain insight on how to have a true competitive advantage.

The complementary analysis lasts two week and is a minimal time investment for our clients. The accelerated process has a detailed and efficient schedule, only needing particular team members at designated times.

WEEK 1

Analysis kick-off with reviewing processes, deliverables and setting expectations

Gain understanding of the client's current state processes and technology landscape through a series of workshops

Use APQC, internal databases and Accelytics' knowledge base to create competitor best-in-class benchmarks

Identifying gaps, client efficiencies and shortcomings by comparing against the benchmarked scores

Determination of root causes and the functional gaps driving low benchmark scores

WEEK 2

Deep dive into opportunity areas, proposing solutions and optimizing new process flows with sustainable actions

Outlining the new functional and technical requirements for the optimized process flows

Impact analysis is conducted based on the ease of implementation and ROI to create a baseline for an implementation roadmap

Executive presentation with analysis findings and dedicated time to ask consultants for clarifications, questions and guidance

PROCESSES

Mapping and outlining the current business processes

Identifying gaps and area of opportunities in the current processes

Benchmarking against competition and scoring of each solution based on business impact and ease of implementation

Determining the root issues and proposing solutions for each challenge

Creating an organization maturity curve to determine current performance

Outlining a new process framework with technology implementation roadmap and business prioritization

"The TPA was more insightful than we thought. We were able to connect with other departments and fully understand how our efforts effect theirs, and understand how connecting our processes with theirs, can truly help improve our overall efficiency as an organization." -VP of Supply Chain

"The TPA process was an unexpected surprise. I have paid other firms hundreds of thousands of dollars to accomplish what Accelytics completed free of charge, we also realized this value in weeks vs. months as well." -Supply Chain Operations Director

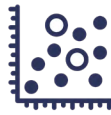

DELIVERABLES

Benchmark analysis

An agnostic technology assessment comparing key players on the Gartner Magic Quadrant and recommending the best fit

GAP prioritization mapping

Technology implementation roadmap

An ROI analysis using actual client data, reports, and operational KPIs for value realization and project justification
