

PRM Inc. iPad .obj File Saving

Before saving things to know

- To build a custom seating system PRM needs **3 critical pieces**: an **order form** with dimensions for client, a **(.obj) file** of the scanned molding bag, and a **PO#** that matches the final quoted system.
- After scanning we highly recommend sending the molded shape to orders@prmrehab.com and to cc your email as well for reference and to be confident the shape has sent to PRM. PRM does it's best to categorize shapes in a document management system once received, however due to not all information being known in order to categorize correctly we also recommend saving the scanned zip files to your iPad.
- In the event an email cannot be sent at the time of molding, the email will stay in the outbox and will send once the iPad has a connection to Wi-Fi that will allow sending.

In the following document you will find step-by-step instructions on how to save a scanned zip file and how to send a scanned zip file in the files iPad app.

How to Save to the iPad File App

1. Scan a client to have a scan populated on the structure SDK app on your iPad

2. Then click in the top right on the iPad screen, tapping the square with an arrow at the top

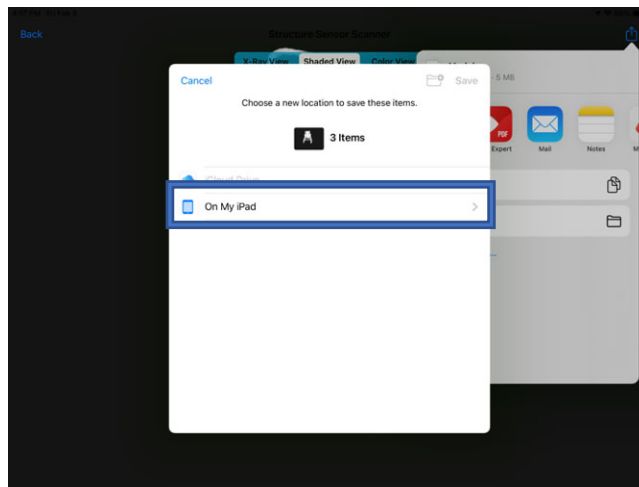

3. Then towards the bottom of the popup tab "save to files"

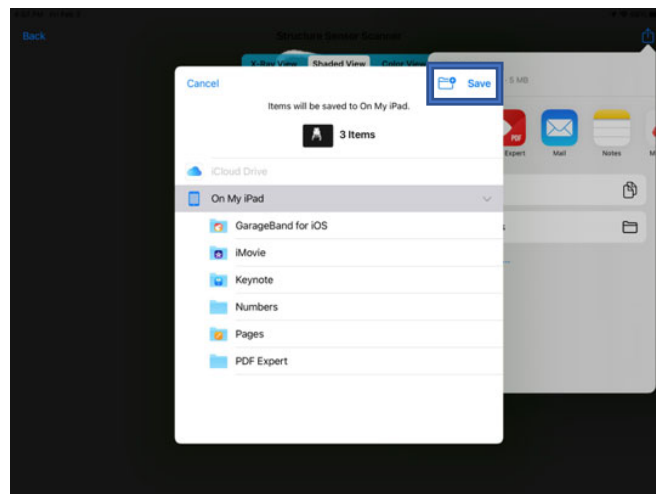

4. Then make sure they are saved “on this iPad”

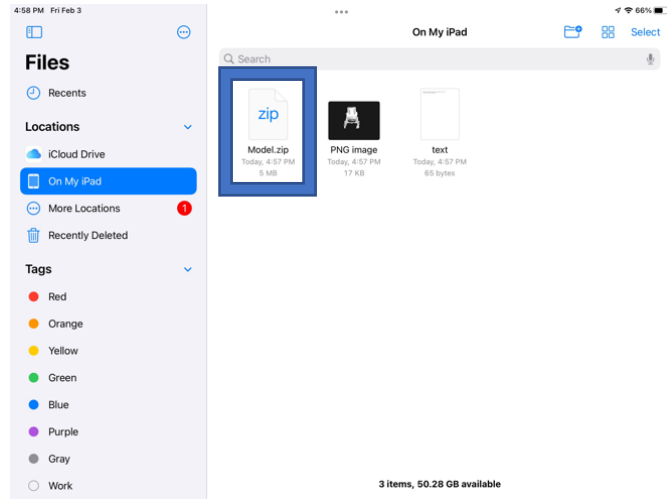

5. You do not have to pick a specific folder location, tap “On My iPad”

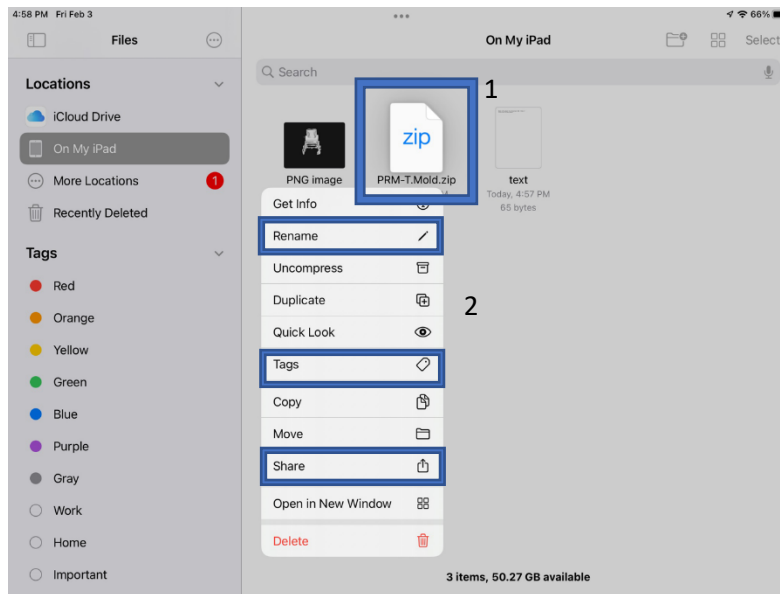

6. Now, then tap save, (however if you tap on the folder icon next to the save button, you can create your own folders to categorized saved files by selecting that folder here in the future)

7. Now go into the files app and tap the name of the scan to rename the scan to patient name and date. Please make sure to click the (Model.zip) file in the app when saving. PRM needs only the .obj file included in the zipped files

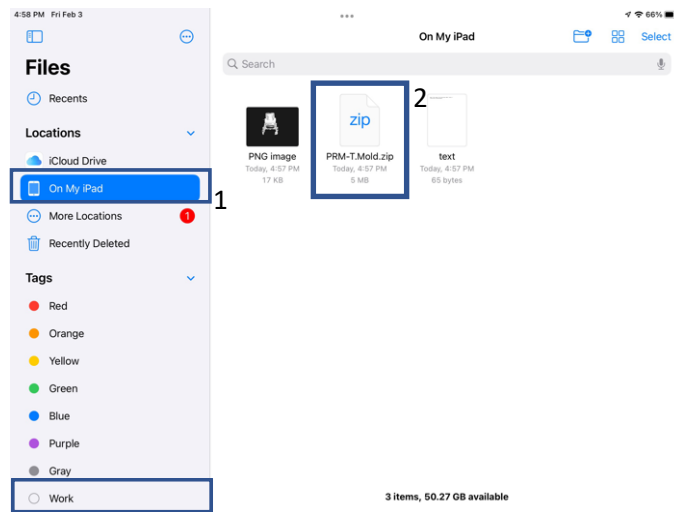

8. Clicking on the Zip icon image will bring a pop up, which will allow to (rename) or (tag) or (move folder) or (share) the .zipfile

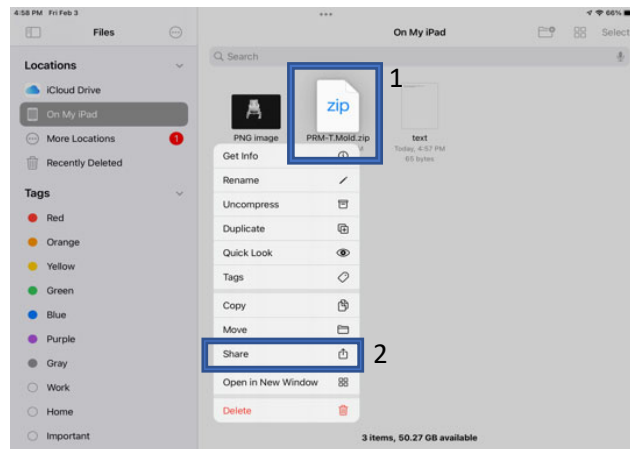

9. Now the file is saved to the folder and location chosen from the previous steps 5 and 6.

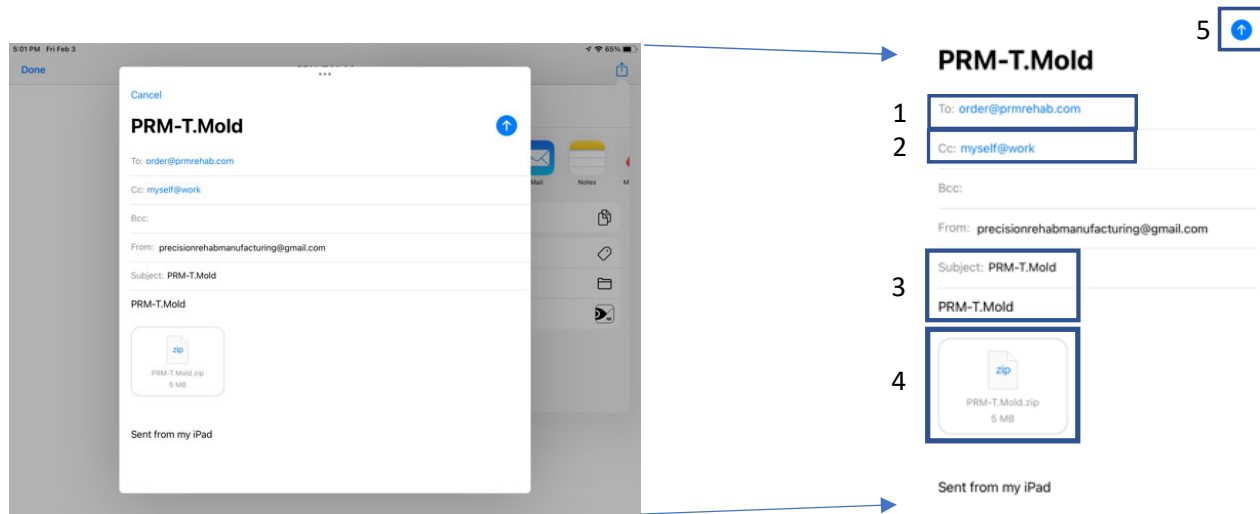

10. To send a file you will then search for a file, by tag, folders, or name and date

11. You will be able to send scans from this location by searching for the file by tag or folder or by name and date, then clicking on the zip file icon, then clicking share

12. Then an email popup will appear, 1 - sending to orders@prmrehab.com, 2 - to cc your work email, 3 – put business name and client name in the subject and in email (*Example, C.name or Client.N or Client Name*), 4 – checking that a zip file is attached to the email, 5 – sending the email and checking that the email sent to your work email address.

We recommend completing steps 1-8 after a mold to save the .obj zip file to the iPad with client name

Complete steps 10-12 to email the molded shape.obj zip file to PRM Inc.

Please don't hesitate to call 814-899-8731 or emailing orders@prmrehab.com for assistance within the ordering process. Or please visit our website www.prmrehab.com for additional information and resources.
