

SHEET PILING & PILES

 TimberGuard

TimberGuard®

TimberGuard is CMI's innovative line of polymer-protected treated wood pilings and lumber. These products are used in marine applications or in conjunction with ShoreGuard sheet pile installations. TimberGuard offers a cost-effective, longer-lasting, safe alternative to treated wood. This product line includes encased round timber piles as well as a wide variety of dimensional lumber. TimberGuard dimensional lumber has been used in a wide variety of marine applications including seawall components (cap, wales and structural piles), piers, docks and other projects where convention lumber is often used.

TimberGuard is produced by an automated process to ensure consistency, precision, and quality control.

- ▶ Resistance to rot, UV damage, and marine borer damage
- ▶ Environmentally friendly, sustainable solution
- ▶ Safe for use in protected bodies of water and environmentally regulated areas

CORROSION RESISTANT • HIGH STRENGTH • LOW WEIGHT • SMALL FOOTPRINT • HIGH QUALITY MANUFACTURING

CMI Limited Co. is the leading manufacturer and fabricator of engineered products providing solutions for marine walls, flood-levee protection, water control, chemical containment, soil stabilization, groundwater cut-off, aluminum bridges, gangways, docks and industrial access applications.

We are driven to enable access and protection of shorelines and waterways while leading advancements in soil stabilization for all types of land and water use through our commitment to innovation. We strive to provide a lower total cost of ownership using alternative and sustainable materials to address an evolving climate and approaches to land use.
