Fund Benefits

Active Management

JCB is a specialist fixed income manager with significant global investment management experience and expertise.

Superior Liquidity and Credit Quality

A domestic high grade bond strategy that invests in Australian Government, semi-Government and supranational bonds (AAA or AA rated securities), providing investors with superior liquidity and credit quality.

Diversification and Income

When bonds are held as part of a broader portfolio of different asset classes, diversification may assist in managing market volatility. Bond securities in general are considered a defensive asset class. The income generated by bond securities is consistent and regular (usually semi-annual).

Market Review & Outlook

US recessionary indicators are all signaling a code red alert. An inverted yield curve persisting for 18 months, coupled with a 19-month sequential decline in the Leading Indicator Index, has an infallible record in predicting a US recession. In a soft-landing scenario, the US Fed will need to make approximately a 300 basis points cut just to reach a neutral rate setting. However, in the event of a full-blown recession, we are anticipating a need for around 500 basis points of easing.

The December US Fed meeting validated the end of the hiking cycle in short term rates with US Fed Chairman, Powell commenting that “you want to cut rates well before inflation is at 2%” otherwise it would be too restrictive. The US Fed also downgraded its inflation forecast and alluded to three cuts in 2024 as Powell showed concern over keeping rates too high for too long.

The inflation trajectory continues a downward path and heading into 2024 this is expected to persist – we still have some hefty inflation prints dropping out of the index so we should get inflation falling on a year-on-year basis for the first five months of the year if we continue to print similar numbers that have been recorded lately. Continued weakness in energy prices and lower wage growth through a deteriorating employment market would also be supportive of the slowing inflation period. The picture in Australia is also encouraging with the inflation story lagging the global softening prices thematic. Given the transmission mechanism of Australian interest rates, we would anticipate this to play catch up in the first quarter of next year.

As the new year commences, 2024 is ripe for geopolitical developments with 40 national elections on the calendar from Taiwan at the start of the year through to the US presidential election in November. The potential for a changing of the guard in foreign policy heightens the chances of an escalation or aggravation amongst countries and should fly in the face of the complacency that currently prevails in risk markets and encourage a flight-to-quality demand for sovereign bonds.

After an extended period of ultra-low bond yields, followed by some painful years of adjustment higher, bonds are arguably in better shape now than they have been in several years, offering a sense of stability and optimism for investors in the current financial landscape.

Fund Update as at 31 December 2023

CC JCB Active Bond Fund (APIR: CHN0005AU)

Fund Review

For the month ending December, the CC JCB Active Bond Fund - Class A units (the Fund) returned 2.75% (after fees), underperforming the Bloomberg AusBond Treasury (0+Yr) Index.

Bond markets finished the 2023 year with a strong performance for the month of December, with the 10y US Treasury finishing the year at 3.88%, which was almost identical to the closing yield of 2022. This was quite remarkable considering we were sitting above 5% in late October. The Australian bond market was led by the US market which also saw a rally of over 100 basis points in the last two months of the year.

During November, much of the rally was driven by optimism of slowing inflation which was coming through both hard data and the survey data released, as well as positioning. For December, the key catalyst was the 'dot plot' released at the FOMC meeting which surprised the market by signalling the Fed members expectation of 75 basis points of rate cuts to the Fed Funds rate in 2024. The market was already pricing cuts for 2024, but this new information resulted in up to six rate cuts being priced for the 2024 calendar year. The incredible part of the Fed 'pivot' was that it was only two weeks prior that Fed Chair Jay Powell noted that any talk of rate cuts was 'premature', adding to the market performance.

In other major markets, both the European Central Bank and Bank of England held respective cash rates at their meetings, and both with a mild hawkish bias, pushing back on market pricing of rate cutting profiles.

Locally, the RBA held the cash rate at 4.35% as expected by market participants. The path of inflation has been following the US and Europe, albeit with a 6-month lag, with a large peak and then consistent slowing. The accompanying RBA statement noted that the Board will be in a 'wait and see' mode with upcoming data to decide whether further rate hikes will be required to bring inflation down quicker from the most recent print of 4.9% YoY in the monthly data series. The RBA retained the language from its November meeting Statement: "Whether further tightening of monetary policy is required to ensure that inflation returns to target in a reasonable timeframe will depend upon the data and the evolving assessment of risks." At JCB, we believe that the rate hiking cycle is over, and the RBA can look to ease from their restrictive stance sometime around the middle of 2024.

From a duration point of view, the portfolio began the month with a long tilt, driven by momentum factors, however as the month went on into the aggressive rally, value factors meant the portfolio did not participate in the rally in totality. Adding to portfolio performance was sector positioning in inflation linked securities and overweight semi government bonds which were aided by the expectations of rate cuts in 2024.

Definition of Terms:

Modified Duration - is a systematic risk or volatility measure for bonds. It measures the bond portfolio's sensitivity to changes in interest rates.

Yield to Maturity - is the total return anticipated on the portfolio if the bond holdings were held until their maturity.

Weighted Average Credit Rating - is a measure of credit risk. It refers to the weighted average of all the bond credit ratings in a bond portfolio.

Duration Weight - refers to the portion of the overall duration attributable to the segment (i.e. credit rating or sector), as a percentage of overall portfolio duration. Contribution to duration is calculated by multiplying an instruments duration by the percentage weight of the instrument in the portfolio. This calculation includes the contribution to duration by holding futures
