

PAST PROJECT : FRANKSTON PRIMARY SCHOOL

CLIENT

- > Department of Education and Training

LOCATION

- > Frankston, Victoria

ARCHITECT

- > Chaulk

VALUE

- > \$1.2m

STATUS

- > Completed Jul 2017

SUMMARY

- > This project required the refurbishment of several existing rooms at the Frankston Primary School. Areas included were classroom spaces, break-out spaces and an amphitheater for the lower primary school grades.

Works encompassed an arched/curved birch ply room divider, recessed shelving details, a wet area and pigeon holes. The curved and stepped levels in the amphitheater provides an assembly and presentation area for the children. The coloured panels on the walls were clad with pin board materials (Autex) to provide acoustic benefits and a place for mounting artwork and notices.

The scope also included the replacement of the windows with new aluminium sets. The design mirrored the original timber windows to satisfy the heritage overlay.

This project was successfully completed on time and within budget in July 2017.

CONSTRUCTION TECHNIQUES EMPLOYED

- > Curved birch ply joinery
- > Autex acoustic pin board cladding
