

## PAST PROJECT : BASKETBALL STADIUM & CLASSROOMS

### CLIENT

> Catholic Education Australia

### LOCATION

> Warragul, Victoria

### ARCHITECT

> Build Eng

### VALUE

> \$3.2m

### STATUS

> Completed May 2019

### SUMMARY

> On time and on budget ... actually early ... much to the client's delight.

Operating within a live and operational site, Kubale Construction staff cordoned off the dilapidated basketball courts and began work to construct an expansive enclosure. The scope included the addition of 4 new classrooms, a staff room, 3 offices and Yr 12 study area along with amenities.

A huge portal steel frame was erected with 90t cranes which was then roofed with an insulating panel. Once sealed, the courts were resurfaced, remarked and new sporting equipment was installed as part of the refurbishment.

The offices and classrooms were clad in Exotec and fully detailed by our staff including floor coverings, glazing, lighting, joinery and electrical/technology installations. Handover to a very happy client was performed within the budget and early, well prior to the client's needs.

### CONSTRUCTION TECHNIQUES EMPLOYED

- > Portal steel framework with insulated panel roofing
- > Working safely within a live and operational environment
- > Exotec claddings on offices and classrooms
