20,000 reasons to become a GWO Certified Training Provider

Check out the opportunity

Jobs in the wind turbine industry are expected to increase at an accelerated rate. The U.S. Bureau of Labor Statistics confirmed that wind turbine service technicians would be one of the fastest-growing careers of the next decade.

GWO safety standards are growing at a double-digit annual rate.

In 2019, eight independent training providers increased the amount of GWO training by 80%, delivering 8,003 Basic Safety Training and Basic Technical Training courses for wind technicians in The U.S and Canada.

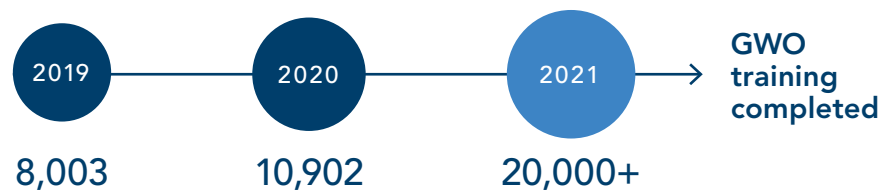

Our 2021 targets:

Double the number of certified training providers

20,000+ course modules completed

Four pillars of GWO Certification – start your journey

01

Physical resources

Your facilities should be fit for purpose, enabling consistent delivery of training and assessment in accordance with GWO Training Standard(s).

02

Management systems

You will need an effective and formally documented system to assure quality course content, safety of training and assessment in compliance with GWO Criteria.

03

Staff resources

Your organisation's staff (eg instructors) must follow national legislation, applicable standards and regulations in the country where you operate.

04

Training + Assessment

You must demonstrate your training and assessment has been done in an orderly manner and evaluated properly.
