

SMARTER DIGITAL LEGACY PLAN

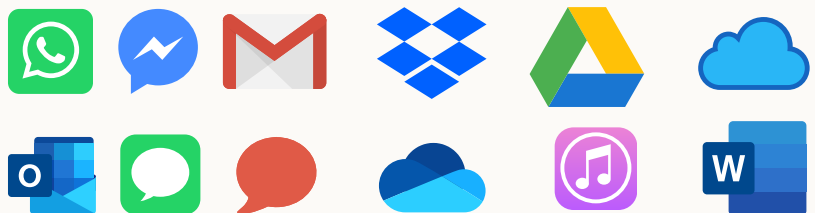

James D. Ford
Principal Solicitor | Blue Ocean Law Group

PEACE OF MIND FOR YOU, COMFORT FOR THOSE LEFT BEHIND.

Our Digital Safe Custody Vault is a highly encrypted and secure cloud storage platform where you keep all your digital records.

In the event of your death, we quickly and securely deliver these assets to the loved ones you selected.

DO YOU KNOW WHAT HAPPENS TO YOUR PHOTOS OR PASSWORDS WHEN YOU DIE?

While it may be confronting to think about, we all possess countless digital assets. Our Digital Safe Custody Vault helps you store and protect all this data in one secure place.

When the time comes, we will safely distribute these items to your loved ones. We can't see any of your sensitive data (unless you provide us with access).

IMPORTANT ITEMS

CRYPTOCURRENCY

Bitcoin, Ethereum, Cardano, etc.

EMAIL ACCOUNTS

Receipts, Subscriptions, Password Resets

PASSWORDS

Devices & online Accounts

PHOTOS / VIDEOS

Memories & Messages

BUSINESS DOCUMENTS

Succession Plans, Assets Lists, Accounts

LEGAL DOCUMENTS

Power of Attorney, Will, Health Directions

MILITARY - GRADE SECURITY

The security of your digital assets is maintained using three layers of encryption, and OWSAP level 3 requirements .

Each user's data is encrypted between their computer and our servers (SSL) then individually encrypted, first with their own unique key, secondly encrypted using the application key, and lastly encrypted with a database key .

Should any piece of our infrastructure be compromised, your data is still safe, as the key is spread over separate application resources.

We also maintain a list of trusted devices, log all changes, who made them, and every time you log in, a single-use code is messaged to you for use in conjunction with your password – meaning if a hacker got a hold of your login details, they still would not be able to gain access.

SSL Encryption

All data sent from your computer is encrypted before leaving (in transit).

Change Logging

All data changes are logged within our system to ensure traceability to potential bad actors.

Forced 2FA

Two Factor Authentication (TFA) is not optional on our platform.

Application Level

All data is encrypted again by the application's unique key before being saved.

Unique User Keys

Each user has a unique key that is used to encrypt only their data.

Intelligent Permissions

You will only see the data your client wants you to see, and that you work together on.

Database encryption

Once the encrypted data is stored, the database itself is automatically encrypted (at rest).

Unique Member Keys

Each staff member within your organisation has their own unique encryption key for the data they create.

RELEASING YOUR DATA

Your lawyer will, upon viewing your death certificate, trigger the release process within the software.

The software will attempt to get in touch with you via email and phone.

Should it be unable to speak with you, it will then speak to your confidants (people you select within the application whom you trust) and ask them for their confirmation regarding your death too.

Should all your confidants (and your lawyer) unanimously agree, your data will be released within 30 days .

If there is any disagreement, the releasing process is paused, and we manually step in to speak with all parties to determine why there is a disagreement.

WHY?

When we pass away, executors and beneficiaries can no longer just divert the snail mail & go through a filing cabinet in the office.

These days, half of our lives are digital.

Our email accounts contain invoices, bills, receipts, password resets and communications.

Our computers contain important legal documents.

Our phones contain thousands of photos and videos, treasured memories and notes.

We have social media accounts, online share trading platforms and websites.

What was once a simple process is now a painful and drawn-out endeavour.

By organising your digital estate in advance, you can be a hero to your loved ones and save them months (and sometimes years) of stress and confusion.
