

## **Zebware's ZebClient® Partners with Wasabi Technologies to Deliver Ultra-Performant Datalakes at a Disruptively Affordable Price**

**Stockholm Nov 17, 2021** – The Swedish software company Zebware and [Wasabi Technologies](#), the [hot cloud storage](#) company, join forces to enable low-cost, scalable, and ultra-performant cloud-based data lakes.

Zebware's cloud data memory bridge, ZebClient, delivers an outstanding boost to cloud data access speeds. ZebClient uniquely disaggregates storage from compute and maximizes the utilization of local persistent memory to provide an exceptional performance where up to 500 times faster access speeds were demonstrated in [tests performed at Intel's 5G Innovation Center](#) in Stockholm, Sweden.

Wasabi provides low-cost, fast, and reliable cloud storage on-demand. Its high-performance storage is 80% less expensive than traditional cloud providers with no fees for egress or API requests. The combination of ZebClient and Wasabi cloud storage is a perfect match for data lakes as data access speeds, availability and scalability are all significantly accelerated.

With its proprietary erasure code at its core, ZebClient increases the speed of reads and writes by maximizing and optimizing the utilization of PMEM/NVMe/SSD. The built-in tiering algorithms safeguards the performance. ZebClient also provides a unified access for object and file data and is available for deployments on bare metal, hypervisors, Docker and in a beta version for Kubernetes. For businesses, this enables placing data including data used for advanced operations, such as AI, ML and Analytics applications in the cloud and maximizing the potential of a hybrid strategy – maintaining high performance at a lower cost, and with the unlimited scalability the cloud offers.

**“Applications being served data via ZebClient can operate as if the cloud data were present on-prem,” said Richard Czech, VP of EMEA Sales for Wasabi. “The joint ZebClient and Wasabi solution truly provides the best of the two worlds of on-prem and cloud to secure a high-performance, cost-efficient, durable and scalable IT infrastructure solution.”**

“Traditionally, boosting performance is a matter of chasing and removing bottlenecks in the infrastructure. Our product eliminates the need for this and what ZebClient also does is to facilitate a new type of data management architecture resulting in radically improved performance, cost cuts, flexibility and scalability”, says Zebware CEO Marie Johansson.

“We see Wasabi as a perfect match for us, with a pioneering offering that is superbly created to capture the opportunities that our joint ultrahigh performance hybrid-cloud solutions offer. We look forward to opening the ability to use the low-cost and durable cloud storage to serve data to advanced applications on-prem. Together, we can make an even greater difference in boosting the adoption of cloud-based data lakes, concludes Marie Johansson.

ZebClient is available for download and is offered on a subscription basis where the price is based on the actual usage of the product.

### **About Zebware**

Zebware was born out of frustration over complex, inflexible and hardware driven storage solutions not delivering according to application development needs nor to brand promises. From our own hard-earned experience, it was obvious that existing solutions were not good enough to support the often rapidly changing requirements of managing, processing, and storing data while still supporting application development requirements. To solve the issues at hand, we invented our own erasure code-based algorithm boosting scalability, security, and performance. This algorithm is now integrated into our products ZebClient® and

Orchesto®. Our vision is to be the world's leading provider of hybrid-cloud enablement software, securing our customers absolute sovereignty of their data in cloud environments.

### **About Wasabi Technologies**

Wasabi provides simple, predictable and affordable hot cloud storage for businesses all over the world. It enables organizations to store and instantly access an unlimited amount of data at 1/5th the price of the competition with no complex tiers or unpredictable egress fees.

Trusted by tens of thousands of customers worldwide, Wasabi has been recognized as one of technology's fastest-growing and most visionary companies. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi has secured nearly \$275 million in funding to date and is a privately held company based in Boston.
