

To whom it may concern,

I have had the pleasure of supervising and mentoring Jeremy Green for the past two years while he worked on undergraduate research, supported by the Research Experiences for Undergraduates (REU) Supplement Funding from the National Science Foundations, in the Department of Computer Science at the University of Illinois at Urbana-Champaign. Jeremy has performed well in every role he has taken within our research opportunities and through this time, he has demonstrated several skills indicating the natural ability to not only achieve, but learn and grow as well throughout his career. Jeremy's engineering background and work with my colleagues and I have made him accustomed to working with quantitative data and complex models. In addition, his consistently positive attitude and air of calm confidence have enabled him to comfortably interface with any individual he may come across.

Under my advising and mentorship, I witnessed him demonstrate several skills that would make him a viable employee and internship candidate. Jeremy was involved in two projects including an independent research project as a student-led project that involved technical writing on gathered data from previous research. During these projects, Jeremy demonstrated the versatility in his ability to work independently as well as within a team environment. Through individual work, he demonstrated critical thinking and analysis as well as sufficient time management in his efforts. His diligence and tenacity gave me due reason to assign him to a project that would be considered very difficult as well as making him a viable team member in future research endeavors. As a team member, he uncovered his exemplary ability to communicate his desires and goals effectively as well as his potential to grow and lead where necessary.

His skill set is not limited to our research as he was personally recommended to do some dataset organization for a colleague of mine. Jeremy quickly started work and exuded excitement and confidence for his ability in the task at hand. In the coming weeks, he would master the project and carry out the desired task in an accurate and precise manner. The efficacy of his actions along with his skills of effective communication made for a quick completion of the project to my colleagues' satisfaction. These projects are prime examples of his great potential, for which I am sure he is eager to capitalize on in these early years of his professional career.

I give Jeremy my highest recommendation as an extremely bright student with an extraordinarily positive attitude. I am confident he will perform at a level higher than anticipated. Please feel free to contact me if you have any questions about this exceptional young man.

Sincerely,

Tao Xie
