

What Users Are Saying About HandiFueler®

"The HandiFueler has increased our servicability to flight line capability. Great product!"
Moody AFB, GA

"You are producing a great product."
McGuire AFB, NJ

"Our AGE shop purchased one of your HandiFueler AGE Carts last year. It's great! Thanks!"
Whiteman AFB, MO

"We've had our HandiFueler for a couple of years now. It is absolutely the best investment. My guys save so much time and hassle servicing equipment...it is absolutely the best for our needs."
Joint Base Pearl Harbor - Hickam

"We just received our 600 gallon HandiFueler Refueler / Defueler last December. It is an outstanding piece of equipment; very well made and thought out. We couldn't be happier."
Iowa ANG

"We just received the HandiFueler AGE Service Cart at my base in Southwest Asia; already everyone loves it, especially compared to the patched together carts we were using. Thank you for making our jobs easier."
An Airbase in Southwest Asia

"We had a guy come in from Offutt AFB and sold our Flight Chief on doing an unfunded request for an AGE HandiFueler. This thing looks Bad Ass! I hope we get it!"
Misawa AB, Japan (They purchased one)

The HandiFueler® is a patented* product, only from Spokane Stainless Technologies

The HandiFueler is the only service cart designed for and DEDICATED to maintaining Aircraft Ground Support Equipment (AGE / GSE).

All routine servicing requirements are readily available: The HandiFueler is equipped to handle all daily routine AGE / GSE servicing of fuel (refueler / defueler), fluids, and tires. The open pump platform provides access to all controls and safety equipment, without trapping dangerous fuel vapors.

Just a few of the safety features designed into the HandiFueler (more on the HandiFueler website):

- Low profile tank makes overturning practically impossible while towing**
- Double-walled stainless steel tank self-contains any possible leaks; inspection port on tank bottom
- Open design of pump platform prevents dangerous buildup of fuel vapors
- Auto-recirculate valve protects pump overheating when nozzle is not in operation
- Carbon impregnated fuel hose; prevents static generation and buildup during fueling/defueling
- Emergency kill "E-Stop" button allows immediate shutdown of pump in an emergency situation
- 10 pound "Purple K" fire extinguisher mounted for fast access in an emergency
- All electrical components are UL/CE rated
- Oversized universal spill kit (PIG)

The HandiFueler is GSA listed, has NSNs assigned, is parts supported by DLA, and of course, supported by Spokane Stainless Technologies (parts, training, and technical support).
