

Case Study: Chelmsford Public Schools

Summary: Chelmsford Public Schools, wanted a rollout of 60 LCD's Cleartouch monitors and Chromebox's to 3 buildings.

Challenges: Short timeframe to complete the deployment. To arrive at the client's desired outcome, existing boards and projectors needed to be removed and relocated with in each school.

Solution: WCA designed and coordinated a schedule based upon the client's timeline to deliver/unbox/mount the LCD's. All Chromebox's were attached and configured to the client's specifications. All cardboard and trash were removed from the buildings and disposed at WCA warehouse. WCA and Cleartouch collaborated on supplying training for the Chelmsford teachers and IT staff to ensure a smooth start to the school year.

Benefits: The Cleartouch solution implemented at Chelmsford Public schools increased Interaction & Collaboration in the classroom for improved student engagement and a more inclusive classroom.

Client Testimonial: "As with many projects, WCA did a great job with the installation of 60 Cleartouch panels in our district this summer. They had a very short window to finish the job. They came in, moved quickly and efficiently, and brought everything together for us within the timeframe we needed. The installers were professional, courteous, and left no mess behind for us to deal with. The communication and pre-installation work with the project manager was great and allowed the project to run smoothly. Communication throughout the project was also excellent. We always knew when and where the installers would be in the district. Overall this was a tremendous experience. While we have used WCA for networking projects in the past, this was our first foray into an AV project, and we were not disappointed at all. We would gladly use them again for future installations."
