## WEBINAR

## WCA Protects Your Data from Ransomware with Veeam & Cloudian

IT managers must manage data growth, meet stringent RPO/RTO objectives, and protect data from loss or malicious attacks. Your choice of a cloud backup provider is critical to meeting these data protection objectives. Wherever your backup data resides, a ransomware attack could render that data useless, potentially shutting down operations. The need for a new approach to data protection has never been greater.

Secure Backup as a Service (BaaS) powered by Veeam and Cloudian provides fast, cloud-based storage and built-in ransomware protection with Object Lock technology.

Come spend a 30-minute lunch with Whalley Computer Associates and learn about the features and benefits to protect your organization. Each webinar attendee will receive a \$25 Gift Card.
