Increasingly, there is recognition of the benefits of a trauma-informed approach and the delivery of such an approach within school systems.\(^1\) Multi-Tiered Systems such as the Positive Behavioral Intervention and Supports (PBIS) framework provide a strong foundation to integrate prevention practices such as a trauma-informed approach through established school leadership teams, professional development practices with ongoing coaching, data based decision making, and coordinated school wide routines for tiered instruction. Integration of prevention efforts within a district or school’s existing PBIS Framework reduces duplication and isolated efforts and resources as well as promotes prevention as a whole to address more broad overall risk factors for students. Integrating prevention practices into current school wide PBIS implementation can also promote stronger application and generalization of skills for students and adults.\(^2, 3, 4\)

According to the national Substance Abuse and Mental Health Services Administration (SAMSHA) a trauma-informed approach for any system, including schools, adheres to the following 4 R’s:

1. **Realizes** the widespread impact of trauma and understands potential paths for recovery;
2. **Recognizes** the signs and symptoms of trauma in clients, families, staff, and others involved with the system;
3. **Responds** by fully integrating knowledge about trauma into policies, procedures, and practices; and
4. **Seeks to actively resist** re-traumatization.\(^4\)

Implementation of the PBIS framework with fidelity in schools simultaneously encourages and fosters recommended trauma-informed school practices through promotion of safe, predictable and routine environments that foster positive, and trusting relationships among students, staff, families/caregivers and community members. The Mid West PBIS Network has created a crosswalk that clarifies more specifically the connection of School-Wide PBIS and Classroom-Wide PBIS practices with supporting students that have been through trauma, and these resources may be helpful for current school teams working to integrate a Trauma-Informed Approach within their PBIS implementation with school staff:

- **School-Wide PBIS**
- **Classroom-Wide PBIS**

The table on the next page provides some considerations for PBIS team enhancements for integrating a trauma-informed approach within PBIS implementation based on the four R’s described and aligns them with some examples of this enhancement in practice based on foundation of PBIS implementation already in place. The corresponding enhancement resource table is to assist teams looking to implement an enhancement within current PBIS implementation.

# Enhancements for Integrating TIC into Your PBIS Framework

<table>
<thead>
<tr>
<th>SCHOOL WIDE PBIS ENHANCEMENTS BASED ON 4 Rs</th>
<th>EXAMPLE OF INTEGRATING THIS ENHANCEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Build knowledge and awareness of school staff on the impact of trauma for students and adults with connection of PBIS implementation.</td>
<td>A school team utilizes ongoing professional learning opportunities available for PBIS to build knowledge about impact of trauma on students before connecting to training on implementation of an aligned PBIS practice on campus.</td>
</tr>
</tbody>
</table>

- Utilize expanded data sources such as school climate, universal social emotional screening, focus groups and additional community data sources (e.g., rates of Baker acts, foster care placements, emergency room visits, arrest rates) to:
  1. Establish the need for a trauma-informed approach
  2. Inform resource mapping to identify gaps in current MTSS for trauma-informed, evidenced based practices.4
  3. Consider integrating necessary social emotional learning competencies as part of current school wide and classroom instruction to focus on mental wellness and replacement skills for learned trauma coping responses such as fight, freeze, or flight.1,4
  4. Support students in using social emotional skills that are taught as a first response to problem behavior through redirection, reteaching and de-escalation techniques.4,5

- A PBIS team reviews community data that illustrates an increase in arrest rates from violent acts in their local school community with examining school wide discipline trends to consider next steps in action planning.
- School wide focus group data suggest students lack self-regulation skills across age groups and the school PBIS team responds with suggestions for instruction and curriculum to focus on self-regulation as part of established and ongoing PBIS instruction.
- A school or district team reviews current partnerships with community mental health agencies to increase available supports in small group and individual counseling as part of tiered supports.
- An existing PBIS leadership team reviews and selects a social emotional learning program then plans for what supports are needed for implementation within existing PBIS and academic school wide instruction, and considers reteaching of these skills within a discipline matrix school wide.
- Classrooms integrate de-escalation skill instruction as part of routines and then add visuals to prompt use of this routine as initial responses to problem behavior.

- Focusing on self-care school wide by supporting staff well-being and identifying and responding to secondary traumatic stress triggers.1,4

- School PBIS team fosters supportive culture for staff self-identification of concerns and use of effective strategies to respond to staff concerns with consideration of student needs and interventions.
- School PBIS team utilizes self-care action planning format with school staff to promote awareness of the need for self-care as well as ways for staff to identify effective strategies.
- School PBIS team utilizes self-care routines regularly throughout the school year and integrates them as part of staff reinforcement events.

PBIS provides a foundation for a trauma-informed prevention approach that reduces risk factors and promotes protective factors for all students.

School-wide enhancements based on the 4 R’s of a trauma-informed approach\(^1\) should be integrated into your PBIS framework:

1. **REALIZE**
   - the widespread impact of trauma and understand the paths for recovery
   - Build knowledge and awareness of school staff on the impact of trauma for students and adults with connection of PBIS implementation.

2. **RECOGNIZE**
   - the signs and symptoms of trauma in students, families, and staff
   - Use expanded data sources to:
     1. Establish the need for a trauma-informed approach.
     2. Inform resource mapping and needs assessment.
     3. Integrate social emotional learning competencies to focus on mental wellness and replacement skills for learned trauma coping responses, like fight replacement, freeze, or flight.
     4. Support students in using social emotional skills taught as a first response to problem behavior through redirection, re-teaching and de-escalation techniques.\(^1,2\)

3. **RESPOND**
   - by fully integrating knowledge about trauma into policies, procedures, and school practices
   - Focus on self-care school wide by supporting student and staff well-being.

4. **RESIST**
   - re-traumatization actively

The **PBIS** framework encourages and fosters trauma-informed school practices by promoting safe, predictable and routine environments that support positive, and trusting relationships among students, staff, families/caregivers and community members.\(^1,3,4\)
