

# 6C Enhancing Multi-tiered Systems of Support to Create Effective Systems of Crisis Response & Recovery

*Presenters:*

*Susan Barrett, Center for Social Behavior Supports, Old Dominion University (VA);  
Tona McGuire, Western Regional Alliance for Pediatric Emergency Management (WA);  
Kira Mauseth, Seattle University (WA)*

- **Topic:** Mental Health/Social-Emotional-Behavioral Well-Being
- **Keywords:** Trauma, Screening, Behavior

# Learning Objectives

- Learn about ISF
- Learn about the phases of disaster/crisis response and recovery
- Discuss how to adapt the system to support the increased social-emotional-behavioral needs of youth and adults

A large orange shape on the left side of the slide, consisting of a rectangle with a quarter-circle cutout on its right side.

Secretary  
Cardona

“We cannot look at mental wellbeing as something to do, if there’s time. We need to make it the foundation on which we are building academic support & recovery. We have to address where students are emotionally before we access bandwidth for learning.”

## Expanding PBIS to include MH with ISF Interconnected Systems Framework

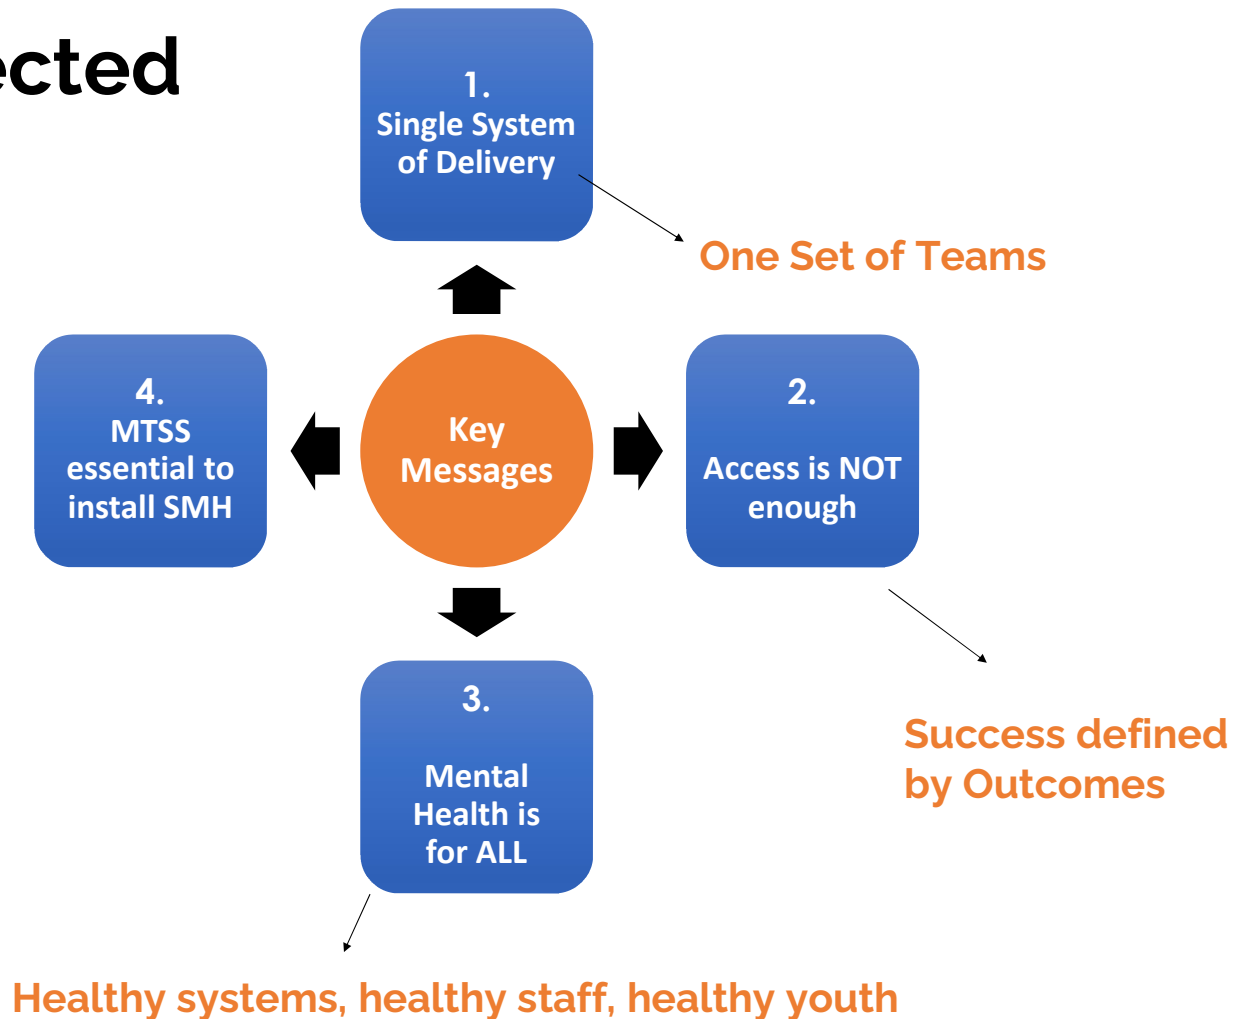

A Structure and process for education and mental health systems to interact in most effective and efficient way.

guided by key stakeholders in education and mental health/community systems

who have the authority to reallocate resources, change role and function of staff, and change policy.

# 4 Key Messages of an Interconnected Approach

Teams  
Data  
Selection Process  
Screening  
Progress Monitoring  
(outcomes/fidelity)  
Coaching

# What are the ways we are designing a healthy environment for all ?

- **Effective teams** that include **youth, family and community mental health providers (expand opportunity and access for members who historically have been excluded)**
- **Data-based** decision making that include school data beyond ODRs **and community data**
- **Formal processes** for the selection & implementation of **evidence-based practices (EBP)** across tiers with team decision making **and customized to fit culture/context/strengths/needs of community.**
- **Early access** through use of comprehensive and equitable approach to screening, which **includes uncovering strengths, story & internalizing and externalizing needs**
- Rigorous progress-monitoring for both fidelity & effectiveness of all interventions **regardless of who delivers**
- Ongoing **coaching at both the systems & practices** level for **both school and community employed professionals (e.g., continuously examining the “health” of the system and the strengths and needs of the caregivers and helpers in the system)**

# Children, Youth & Teens in Critical Incidents & Disasters:

## Principles and Considerations for Behavioral Health

# Agenda

Disaster phases and timelines

Population Exposure Model

Common Symptoms and  
Experiences

Effective Interventions

Resilience Building

# Phases of Disaster

## Impact Phase

◦0-48 hours post-event. Focus is on safety, communication, assessment of ongoing threat.

## Rescue Phase

◦0-1 week post-event. Primary goal is to adjust. Psychological issues: resiliency vs. exhaustion and orientation around what has happened.

## Honeymoon Phase

◦1-4 weeks post-event. Community leaders are promising support, bonding and support is high, Sense of relief for survivors, Unrealistic expectations of recovery and denial of the impact.

## Disillusionment Phase

◦1 month to 9 months post-event (usually about 6-9 months post impact) Limits of disaster assistance become more clear; reality of the extent and impact of the disaster become evident.

## Reconstruction & Recovery

◦3 months to ongoing; Community on the way to healing, May continue for years; survivors begin to realize they will need to solve the rebuilding issues themselves, May develop sense of empowerment.

# **Impact Phase – 0-48 hours post event**

## **Areas of Focus**

- **Focus on psychological and physical safety**
- **Immediate threat / risk reduction or mitigation**
- **Acute survival and triage needs**
- **Assessment of potential for future (ongoing) threat**

## **Interventions**

- **Psychological First aid**
- **Shock recovery (heat, water, medical triage)**

# RESCUE PHASE: 0-1 week post event

## Areas of Focus

- Adjustment to current circumstances
- Resilience vs. Exhaustion
- Processing reality of what occurred

## Interventions

- Present focus (here and now)
- No mandatory debriefing participation
- Space and time allowed (structurally) for processing experiences of those who want to do so.
- Communication and processing (not trauma therapy)

# Honeymoon phase: 1-4 weeks post event

## Areas of Focus

- High community bonding
- External supports are high / strong
- Expectations about recovery or denial of impact may be strong

## Interventions

- Appropriately harnessing motivation to increase long-term resilience
  - Establishing med to long term behavioral health supports within the community or structure
  - Training volunteers on psychological supports
- Re-prioritizing focus away from “waiting until things get back to normal” and on to empowerment for intentional cultural shifts / change

Disillusionment phase:  
1-9 months post event  
(usually about 6 mos)

### **Areas of Focus**

- Limits of external assistance become clear
- Hopelessness around reality of event can set in
- Coming to term with losses

### **Interventions**

- Active coping skills
- Sensory interventions
- Harm reduction related to impulsive or high-risk behaviors
- Suicide intervention training & support for survivors

# **Reconstruction and Recovery**

## **Areas of Focus**

- **Active coping to internalize long term**
- **Post-Traumatic Growth**

## **Interventions**

- **Active resilience building (Purpose, Connection, Adaptability & Hope)**
- **Meaning-Making activities**
- **Connection to things larger than self (social interest)**

# Factors that influence the reconstruction / recovery pathway

OR may result in the experience of a “disaster cascade” depending on the nature of the secondary impact

- Social marginalization
- Discrimination
- Economic status
- Access to resources and healthcare
- ACES (Adverse Childhood experiences)
- Previous experiences in disasters or critical incidents
- Sociopolitical climate
- Additional waves of infection / illness / restrictions that result

# Disaster cascades:

Defined as : more than one large-scale impact that occurs during the recovery window (18-24 months) from the original impact.

- Tax already depleted mental, emotional and physical resources
- Re-start the disaster recovery cycle, but at a lower baseline
- Extend the recovery cycle
- Increase acuity of symptoms

# Trauma, Stress and Resilience

- All trauma is stressful, but all stress isn't necessarily traumatic
  - (ducks and birds)
  - Stress can build up over time
- The ability to function effectively CAN be compromised by either one.
  - Emotionally, Cognitively, Behaviorally, Physically, Socially, Spiritually
- Long term moderate to severe stress affects the brain in ways similarly to traumatic events
  - Large-scale disasters as well as smaller-scale critical incidents
- Resilience can be developed intentionally, or can come about as a result of adverse experiences

# Population Exposure Model

Those closest to the “epicenter” of the disaster in terms of immediate and severe impact are most likely to be affected psychologically.

Adapted from : U.S. Dept of Health and Human Services. (2004). Mental Health Response to Mass Violence and Terrorism: A Training Manual. DHHS Pub. No. SMA 3959 Rockville, MD; Center for Mental Health Services, Substance Abuse and Mental Health Services Administration. p. 11.

# **COMMON EXPERIENCES OR CHALLENGES**

# Structures of Note:

## Prefrontal cortex:

higher-level functioning, planning, organization, details, filtering.

## Limbic system:

emotion, impulse, pleasure and safety, memory, defense, protection (fight, flight or freeze).

Includes the Amygdala & Hippocampus

We are all still (at least slightly more) limbically activated.

A photograph of three young children of diverse backgrounds smiling and posing together in a classroom. The child on the left is a Black girl with braids, the middle child is a white girl with blonde hair, and the child on the right is a Black boy with curly hair wearing a yellow shirt. They are in a bright classroom with other children and furniture visible in the background.

# **Best Practices in Disaster / Critical Incident Recovery**

# What children, youth & teens NEED

01

Safety &  
Security

02

Purpose &  
Meaning

03

Trust &  
Hope

# Effective Interventions

## Active Coping

- Sensory engagement (sight, touch, taste, smell or sound)
- Movement
- Structure / schedule
- Goals that are the right scale / scope
- Culturally relevant and appropriate suggestions!!!!
  - Do your homework if you are working with a family where you may be unfamiliar with norms.

## Active Listening - be aware of high and low context cultures

Non-Verbal Communication

Open Ended questions

Clarifying Questions

Seek to deeply UNDERSTAND (not to fix or problem solve).

Express Empathy

# More please: *in a healthy way*

## Serotonin

- Movement / exercise
- Sun exposure
- Massage
- Hot / Cold showers
- What makes them feel ***comfortable and secure?***

## Dopamine

- Movement / exercise
- Task achievement (to-do lists, long term goals as well)
- Creating something – music, art, writing
- What is ***fun or rewarding*** for them?

# Resilience Development

## **Purpose**

What motivates you? What is important to you? What are you striving for, or what helps you move forward?

## **Adaptability**

How can you make adjustments that are needed, to time, space, fun, expectations, etc? How can you respond with curiosity?

## **Hope**

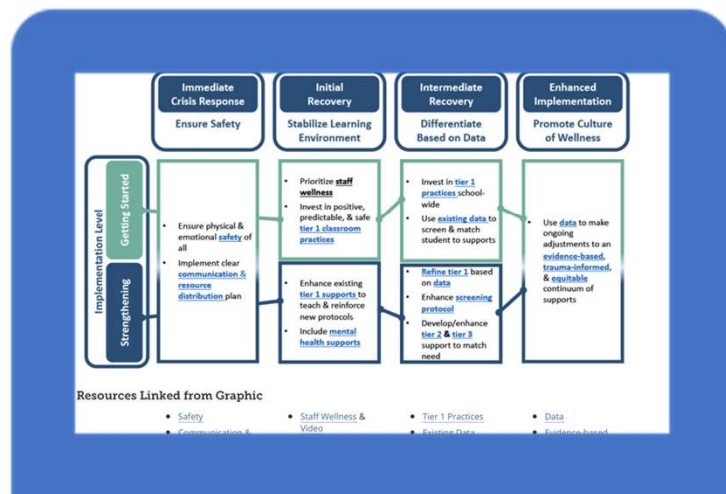

How can you shift your thinking from 'threat' to 'challenge' and what are the realistic opportunities you have?

## **Connection**

To whom or what are you connected? Connection can be anything that prevents isolation.

# Check out our Practice Brief on *Supporting PBIS Implementation through Phases of Crisis Recovery*

<https://www.pbis.org/resource/supporting-pbis-implementation-through-phases-of-crisis-recovery>

<https://www.pbis.org/current/returning-to-school-during-and-after-crisis>

## Supporting PBIS Implementation Through Phases of Crisis Recovery

As school and district communities consider options for effectively supporting students, educators, and families during and after a crisis, it can be difficult to identify critical impactful actions. Mindsets can range from not knowing where to start to thinking we must do it all, which can result in not doing anything. The PBIS framework can serve as a road map to meeting this challenge. It is best to think in terms of implementing as small incremental steps that result in progress toward effectively meeting student, educator, and family needs.

This document provides strategies to guide implementation efforts through the various phase of crisis recovery. As Figure 1 illustrates, schools and districts choose their path based on their implementation level: getting started (green) or strengthening (blue). Then, they consider key actions based on their crisis response phase.

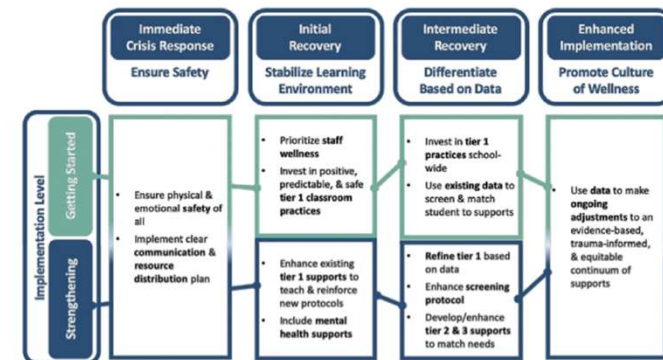

Figure 1. Key actions by implementation level and crisis response phase.

More comprehensive information can be found in the [Supporting Schools During and After Crisis](#)<sup>1</sup> section of the [Center on PBIS website](#)<sup>2</sup>

## Immediate Crisis Response

Ensure Safety

## Initial Recovery

Stabilize Learning  
Environment

## Intermediate Recovery

Differentiate  
Based on Data

## Enhanced Implementation

Promote Culture  
of Wellness

Implementation Level

Getting Started

Strengthening

- Ensure physical & emotional **safety** of all
- Implement clear **communication & resource distribution** plan

- Prioritize **staff wellness**  
Invest in positive relationships & safe  
**tier 1 classroom practices**

- Enhance existing **tier 1 supports** to teach & reinforce new protocols
- Include **mental health supports**

- Invest in **tier 1 practices** school-wide
- Use **existing data** to screen & match student to supports

- **Refine tier 1** based on **data**
- Enhance **screening protocol**
- Develop/enhance **tier 2 & tier 3** support to match need

- Use **data** to make ongoing adjustments to an **evidence-based, trauma-informed, & equitable** continuum of supports

# Check out our Practice Brief on *Building a Culture of Staff Wellness Through a Multi- Tiered System of Support*

<https://www.pbis.org/resource/building-a-culture-of-staff-wellness-through-multi-tiered-system-of-supports>

## Building a Culture of Staff Wellness Through Multi-Tiered System of Supports

Schools everywhere are facing teacher shortages due to a shrinking pool of applicants and a growing number of teachers leaving the profession. If we are going to attract and retain highly qualified effective teachers, we will need to be more intentional in designing systems that support a healthy workforce. PBIS has a long tradition of creating effective teaching and learning environments by focusing on supporting adult behavior through (a) ongoing staff input and feedback, (b) ongoing professional learning, and (c) a phased based approach to implementation. The purpose of this brief is to provide recommendations to district and school leadership teams on how the components of the Positive Behavioral Interventions and Supports (PBIS) can be used to prioritize staff health and wellbeing.

Implementation of PBIS has been shown to improve overall organizational health with the most significant impacts identified in shared commitment to student success, an increased sense of warmth for staff, positive relationships with colleagues, and improved school leader ability to advocate for necessary resources at the district level to support staff and students (Bradshaw et al., 2008). These noted impacts on organizational health and other outcomes of PBIS implementation (e.g., reducing disruptive behaviors, building social emotional skills and improving teacher self-efficacy) are significantly related to improved job satisfaction and reduction of emotional exhaustion/stress for educators (Grayson & Alvarez, 2008; Brouwers & Tomic, 2000; Skaalvik & Skaalvik, 2011). Many communities are addressing significant social issues (e.g., social inequality, drug addiction, environmental impacts, public health concerns) affecting large groups of school community members. Education systems implementing multi-tiered system of support (MTSS) frameworks, like PBIS, are positioned to respond more effectively to the increasing needs of children and educators impacted by trauma and stress (Johnson et al., 2005; Wildeman et al., 2014).

### Impact of Occupational Stress for Educators and Students

The American Institute of Stress identifies that an individual's perceived level of occupational stress is strongly impacted by (a) the intensity of the demands being placed on them paired with (b) their sense of control or decision-making in dealing with these demands (American Institute of Stress, retrieved from <https://www.stress.org>). Occupational stress adversely affects teachers and students in the following ways.

- Teachers who provide emotional support and have positive relationships with their students influence their health across the age span, thus promoting overall mental wellness and life

<https://www.pbis.org/resource/supporting-students-with-disabilities-in-the-classroom-within-a-pbis-framework>

## Top Ten Tier 1 Practices to Support *ALL* Students' Social, Emotional, and Behavioral Wellbeing

1. Design & adapt the **physical environment**
2. Develop & explicitly teach **routines**
3. Post, define, & teach 3-5 positive **expectations**
4. Promote active **engagement**
5. Provide **prompts**
6. Actively **supervise**
7. Use behavior-specific **praise** & other strategies to acknowledge
8. Use **error correction** & other strategies to respond
9. Use more positives than correctives (**5:1 ratio**)
10. Collect & use **data**

## Teaching and Learning Practices

Warm  
Welcome/Positive  
Greetings

Active Listening

Press Pause/  
Neutralizing  
Routines

Space between behavior and  
response

Box Breathing

Movement to  
increase neural  
integration

Using Social  
Media  
Responsibly

# Public Health Model

- Prevention
- Focus on Specific Behaviors across population
- Ensure widespread adoption
- Layered and connected
- Ensure vast majority are healthy- data system and modify as needed

# Questions and Discussion

*What questions do you have? What examples can you share?*
