

Auscultation Solutions for COVID-19

Assessing Patients Safely

Frontline providers make critical triage and management decisions. This includes listening to heart and lung sounds.

Typical Triage Decisions for COVID-19:

Eko stethoscopes deliver high-fidelity auscultation sound transmission and ECG tracing with active noise cancellation, digital amplification, and real-time waveform visualization. FDA-cleared Eko AI can automatically detect heart murmurs and atrial fibrillation.

3M™ Littmann® CORE
Digital Stethoscope
\$349

Eko DUO
ECG + Digital Stethoscope
\$349

- | | |
|--------------------------------------|---|
| Active noise cancellation | Single-lead ECG tracing & visualization |
| Up to 40x amplification | Digital heart & lung sounds |
| Wireless functionality via Bluetooth | Up to 60x amplification |
| Digital & analog modes | Wireless functionality via Bluetooth |
| FDA cleared | FDA cleared and CE marked |

Protecting Providers

Frontline providers are among the most vulnerable to infection during outbreaks. They need maximal protection during patient encounters.

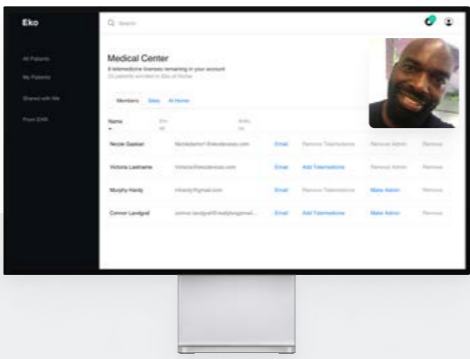

Eko Infection Control Starter Kit

25 Complete Digital Auscultation Kits

- Wireless Auscultation with 3M™ Littmann® CORE Digital Stethoscope or Eko DUO ECG + Digital Stethoscope + Live Streaming + AI Analysis with Pro Telehealth license for 1 year + Apple iPod Touch + AirPods Wireless and tele-auscultation
- Laminated 8.5" x 11" Quick Start Guides + 1-hour implementation session with Eko + Toll-free support as needed—we remain available to help you

Eko stethoscopes reduce disease exposure by reducing bodily contact and breaks in PPE. Sounds can be transmitted wirelessly in real-time — local via Bluetooth and remote via WiFi.

Listening Workflows

In-person
Listening

Some clinical workflows require providers to be in the room with the patient. Eko’s auscultation solutions for infection control allow a provider to perform in-person listening **under maximum PPE** at a range of up to **20 feet from the patient**.

Remote
Listening

Health systems can use telemedicine to help their healthcare providers manage patients from a remote location. Eko’s auscultation solutions for infection control allow an **operator under maximum PPE** to perform high-fidelity listening, in cooperation with a **provider at a remote location** anywhere.

Use Cases

In-person:
While under PPE

Remote:
