TECHNOLOGY FOR RELOCATION CO2 OFFSET

The ecolegIT Program

The need for more sustainable workflows within global mobility has become apparent. ecolegIT, in collaboration with Parsifal Corporation, has created a unique and simple technology solution for corporate customers and suppliers – offering a full carbon emission offset compensation per individual move.

KEY FEATURES AND BENEFITS:

### A Durable, Environmental and Social Program

- ecolegIT offsets carbon emissions through carefully selected sustainably forestry projects that also contribute to local social and environmental goals.
- For the compensation of CO2 offset, ecolegIT has established reliable global forestry partners that meet strict criteria (i.e., governmental validation).

Combined in One Per-Shipment Fee

- Through a fixed ecolegIT fee per shipment, ecolegIT offers participants a clear, standardized cost structure.
- One simple fee per shipment (i.e., ocean, road, air) is seamlessly converted into a compensation for carbon-offset, validated and certified for the corporate and supplier customer.

Reliable with Parsifal's EcoAudit

- Parsifal Corporation provides the validation process from the shipment's emission calculation to the resulting carbon offset utilizing the Parsifal EcoAudit validation procedure.
- Compensation is traced back to its source (the carbon credits gained from a carefully maintained sustainable forestry project), ensuring the amount of project credits gained equal the amount of credits necessary to compensate for the CO2 emission of participants' shipments.

ecolegIT ensures a transparent and hassle-free carbon footprint reduction program *(patent pending)* **through four key components:**

1. **Unique algorithm technology** - Able to quickly and simultaneously process large amounts of shipment data

2. **Calculator** – Converting the actual move input into a validated CO_2 emission footprint

3. **Compensation offset engine** – Real-time processing of the actual offset compensation

4. **Automated certification** – Reporting audited certificates and compensation data

Other New Technology at Parsifal

The ReloPricing™ and PRISMgmt™ systems will help you to navigate your relocation needs. These tools provide a fully integrated, wing-to-wing solution that reduce friction points by streamlining data exchange and consolidating supply chain interactions. As a result, the digital experience is dramatically improved for the relocating employee, as well as the corporate client, RMC and supplier.

ReloPricing™

- Pricing made easy
- Global and US Domestic quoting made simple
- Distribution/Booking automated
- RFP tools
- UI (User Interface)

PRISMgmt™

- Shipment data from initiation to delivery/invoicing
- Multi-layer API integration
- Shipment tracking & move management
- Ongoing perm storage tracking
- Management of financials
- UpStream auditing
