## Plastic Effluent Tank

The Tuff Tank is a plastic waste holding tank designed to help where there is no onsite drainage or sewers.

Its flat "slide under" design allows it to be positioned alongside or underneath site accommodation, glamping huts and event industry equipment such as toilets, showers and catering units.

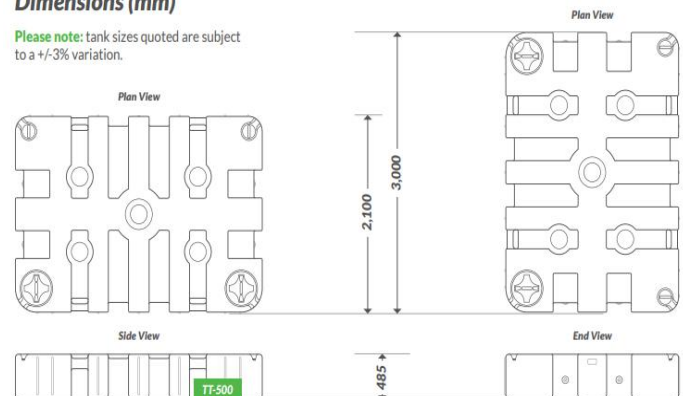

We can also supply an emptying service whether you require an immediate one off call out or a regular scheduled job.

- 2 x large 12" waste access hatches (one either end) make for easy access for waste emptying and allow easy cleansing and sanitising
- 2 x small 5" waste inlet ports allow easy connection to standard 4" waste outlets from toilets / showers / canteens etc.
- All access points are supplied with screw on lids: minimal chance any residual waste will spill during transport
- Plastic Tuff Tanks are much lighter than steel tanks (120-140 kgs compared with 420 kgs for a 500 gallon tank)
- Deliver and position Plastic Tuff Tanks with far less effort, heavy equipment and expense than steel tanks
- Plastic Tuff Tanks are easy to clean and maintain a hygienic image

### Dimensions (mm)

Please note: tank sizes quoted are subject to a +/-3% variation.

Now available in 3 sizes 500, 750 and 1000 gallon
