

## Checking SDK Connectivity

If you want to test whether you've set your environment variables properly and that the SDK can connect to Rookout, you can do a simple connectivity check.

First, don't forget to set all of the environment variables [as described in our docs](#).

The only required one is `ROOKOUT_TOKEN`.

- 1 Export `ROOKOUT_TOKEN=`  
[Your Rookout Token]
- 2 Simply run these commands in  
your terminal:

**For Python:**

```
python -m rook
```

**For Java:**

```
java -jar rook.jar
```

**For Node.js**

```
node_modules/.bin/rookout-check
```
