NS DOOR PANELS

AL13960

Roll Up Door Rubber Track

This information will hopefully help clear up some confusion we have regarding our New Style roll up door. We made a running design change to the roll up door bearings & door panels that you need to be aware of for servicing or selling parts. I will call the 1st version NS-1 & the 2nd version NS-2 to help limit the confusion. We did not document the change to a Serial number but the change was made around June of 2013. The change consisted of three items. Number one is a change to the NS-2 roll door panels that incorporates a keyway in the axle cavity to accommodate the new style bearing although the part number did not change. Number two change is the NS-2 door panels are milled deeper to provide clearance for the NS-2 inner bearing (please see attachment). Number three change is the NS-2 door uses inner & outer bearings that are white in color & have tabs that slide into the keyway on the NS-2 door panel. All other components of the new style roll up doors are the same. Please keep this in mind if you receive a call for parts or service on a new style roll up door.
