Adacel Commemorates 20 Years of Collaboration with the United States Air Force

Orlando, Florida, USA— On August 17th, Adacel Technologies Limited (**Adacel**), an industry leader in advanced air traffic management solutions and simulation and training systems and the United States Air Force (USAF) representatives commemorated 20 years of collaboration with a ceremony during the Joint Service ATC Symposium, in Myrtle Beach, South Carolina.

In 2002, USAF awarded its first major ATC Training Simulation Systems (TSS) contract to Adacel. Over 1.5 million lines of unique software code later, Adacel successfully delivered its MaxSim TSS to thousands of users over the years at 91 USAF locations worldwide. These modern systems showcase high-fidelity military ATC functionality, complex tactical flight patterns tailored to the USAF, hundreds of scenarios with high-accuracy visuals, and broad functionality. The first system was installed in October 2002 at Eglin Air Force Base in the western Florida Panhandle. Additional contracts have followed in 2014 and 2018.

“The USAF contracts have played a critical role in Adacel’s success over the last 20 years. We have built, deployed, and diligently maintained the MaxSim training systems with a keen focus in mind: to provide customized, world-class ATC training solutions for the US Air Force’s air traffic controllers to fully support the organization’s critical missions and military preparedness,” shares Daniel Verret, Adacel’s CEO. “This collaboration truly represents one of Adacel’s core values to empower our customers and team members to reach their potential. “We look forward to continued collaborations and are absolutely committed to evolving and supporting the systems for years to come,” continued Mr. Verret.

Edgar A. Wright, Executive Director, Headquarters Air Force Flight, Standards Agency, added: “The US Air Force is pleased to celebrate 20 years of partnership with Adacel. The MaxSim tower simulator has been a highly capable and reliable product, that has trained over 8,000 US Air Force military controllers during the past two decades. We join Adacel in their celebration and congratulate them on a job well done!”

About Adacel:

Established in 1987, Adacel is a publicly traded company listed on the ASX. The company plays a significant role in global air space safety. A world-leader in its industry, Adacel applies cutting-edge technologies to develop advanced air traffic control simulation and training systems and state-of-the-art air traffic management solutions. Adacel’s customers include international air navigation service providers (ANSPs), military, defense & security organizations, universities, and airport authorities. More than 21% of the world’s airspace is managed with Adacel’s Aurora ATM software. MaxSim Tower Simulator and Training systems lead the industry with the highest number of installations worldwide. Adacel’s latest flagship system, REVAL, a digital Air Traffic Control (ATC) tower system delivers a wide spectrum of digital tower operational solutions, from consulting services to system design, development, deployment, and support.
