

FILAMENT LAMP

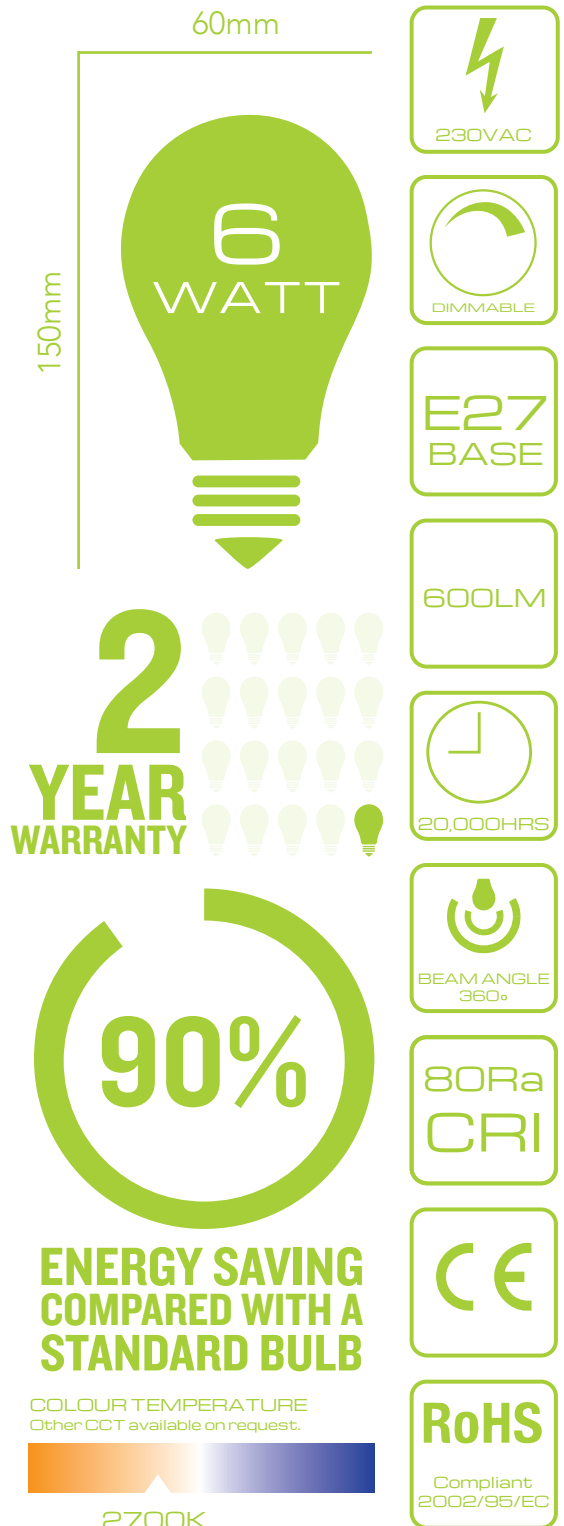

EP-GA60E27-6W-3K

This new LED filament bulb is a light bulb that uses LEDs as its filaments. Light is emitted from the LED filaments uniformly and evenly in all directions, instead of focusing it in a specific area in the way that many LED bulbs do.

It features a close resemblance with the traditional incandescent bulb. The LED filaments are placed inside the glass enclosure and sealed with an inert gas to assist with thermal management.
