Figure 1: Three-dimensional (A) and two-dimensional (B) computed tomography coronary angiography reconstruction showing dissection flaps (white arrows) in the left main stem. Abbreviations: AO, aorta; LMS, left main stem.

Figure 2: Boxplot of healed and unhealed lesions showing number of days from spontaneous coronary artery dissection (SCAD) till follow-up computed tomography coronary angiography (CTCA).
Figure 3: Bar graph showing difference of healed and unhealed dissections for early (<80 days) versus late (≥80 days) computed tomography coronary angiography (CTCA).
