

RPA for Transport

A flexible software solution
for transportation & logistics

Are manual, repetitive tasks taking the time of key personnel in your Transportation & Logistics company?

Windmill has solved this issue using Kofax RPA to handle many different processes and interfacing to your Transport Management System. Transportation and third-party logistics (3PLs) providers often employ several back-office staff and customer service representatives (CSRs) to manually enter and re-key data for several core business activities, including:

Scheduling and tracking shipments (Track and Trace)

Gathering freight bill payments

Generating and collecting on invoices

Resolving payment disputes

Securing proofs of delivery

Capturing, researching and closing out loads

RPA for Transport

A flexible software solution
for transportation & logistics

A new way for Supply Chain Automation

A new approach is available: one that relies on “software robot” technology and not complex coding to integrate to any internal system you operate.

- Interfaces to TruckMate, TMW, and other TMS systems
- Extracts from Email, Excel, PDFs, B2B Portals, and Websites
- Interacts with databases for your customer and vendor systems
- Automates manual handling and dispute resolution
- Reduces human intervention with timely exception monitoring and reporting
- Handles financial processes such as cash applications, journal entries, and period closes

“ We received a return on investment within 6 months using a Windmill RPA Solution. We also improved quality of data, with consistent results for driver pick-up experience.
- Major Transportation and Logistics Company

Benefits of Windmill RPA for Transport:

- Increase staff productivity
- Provide more time for focusing on your customers
- Reduce administrative costs
- Make scheduling, tracking and payment improvements
- RPA can operate around the clock
