

To Scholarship Committee,

My name is John Smith and I am writing in hopes to get approved for a scholarship. I have devoted my lifestyle to becoming a rocket engineer but, unfortunately, was not privileged enough to be born into a family that can financially support my dreams of pursuing this path. Nevertheless, I refused to let my circumstances dictate the path that I have chosen, and I have continued to strive for the attention of an investor or for the chance at your university's scholarship. Ten years from now, I want to be on the front lines of commercial space flight and this scholarship will help me achieve it.

Everything began at age 12 for me, when my parents began to recognize my knack for chemistry and mechanics. I began experimenting with homemade gunpowder-based rocket tests, where I gradually incorporated fireworks into my rocket experiments and eventually began using aluminum foil to enable easier casting for the gunpowder. These made all of my experiments much more complex. Ultimately, I continued to learn theory about the crucial element of explosives in rocket propulsion. My present goal is to have access to the state-of-the-art resources that Kingstar University has for the development of better rocket engines. An opportunity like this is no shorter than a miracle for those of us in rocket engineering.

I believe I can add value to your rocket science community of students because of my unbridled motivation to innovate and find better solutions to creating the rockets of our future. I share the vision of our modern leaders, such as Elon Musk, and I believe that space flight should be an accessible option for the entire human race. Thus, as I have stated in my opening

paragraph, I want to be able to be on the front lines when creating the newest commercial rocket ships of the future. My life-long experiences and experimentation, alongside collaborations with other rocketry professionals, make me a fitting candidate for your scholarship. I am prepared to demonstrate my life's long work at any given moment I may be asked by your committee.

I aspire and long to stay in rocketry because it is all that I have ever wanted for as long as I can remember. It feels as if I have been destined to be on this path and no other since I was conscious of my desire for it. I have devoted my whole life to pursuing this one goal and have focused on it single-mindedly. I cannot account for others' motivations, but I can account for my passion and interest in the field of rocketry, and I can say that I have never given up on it, even through hardship. I have stayed devoted.

Looking forward to your reply!

John Smith
