by heat.

Welcome to the Thermic Collection

Thermic rappresenta una serie di prodotti ad adesione diretta su metallo, plastica e legno che si contraddistinguono da una particolare lavorazione che prevede la deposizione, attraverso un processo di tradizionale applicazione con pistola a spruzzo, di un enzima dal pigmento colorato che al raggiungimento della temperatura di 30°C o 60°C reagisce diventando trasparente e lasciando intravedere la colorazione o texture di base del supporto trattato.

Thermic represents a series of products in direct adhesion on metal, plastic and wood, characterized from a particular process through which an enzyme with a colored pigment is applied on the treated surface through a process of traditional application by spraying. When the enzyme reaches the temperature of 30°C or 60°C, it reacts becoming transparent and leaving visible the coloration or texture of the treated support.

About Thermic Story

I prodotti Thermic possono essere impiegati sia in contesti da interior, come per esempio interruttori, illuminotecnica, maniglie, sedute, arredamento, accessori, porte, tavoli, complementi d'arredo, sia in contesti da outdoor, come arredo urbano, retail, spazi pubblici, hospitality (se protetti con l'apposito protettivo per esterno). I prodotti Thermic sono prodotti semplici da utilizzare e garantiscono alte coperture e un'opacità costante.

The products Thermic can be employed both for interior employments, like for example switches, lighting, handles, chairs, furniture complements, accessories, doors, tables, and for outdoor employments, like public furnishings, retail, public spaces, hospitality (if protected with the specific top coat for outdoor). The products Thermic are simple to be applied and they guarantee high coverages and a constant opacity.
