

Continuous Graduation Improvement with ADAPT

How can you ensure continued graduation success?

Mesa has developed the **Assess – Determine – Align – Perform – Track** approach in hopes of challenging the status quo and embracing a holistic approach towards “perfect” graduation. Our solution, Mesa onTime, automates the daunting manual tasks that plague counselors on a daily basis. The adoption of our model when incorporated with Mesa’s logic, specifically addresses off-track students by finding flags, or potential deficiencies within a student’s academic profile. By removing those redundant administrative barriers, it liberates the counselor to focus on the most impactful part of their job: counseling.

1. **Assess** the current progress of each student towards graduation by integrating with your SIS and pulling transcript and schedule data every night
2. **Determine** specific deficiencies by comparing every student’s transcript and schedule to their relevant requirements
3. **Align** each student to their most optimal pathway based on local and state logic by developing smart grad plans and automatically finding flags in real time
4. **Perform** changes to those student schedules who have fallen off track and mark changes as resolved in Mesa
5. **Track** outcomes going forward through robust, group-level dashboards to ensure equitable outcomes

The ADAPT Framework
