Assuming you've gotten a good night of sleep, your thinking will be sharpest in the morning so let's start the day strong with some math! Whoohoo!

Khan Academy math practice has got your back. Depending on your confidence and grade level, one of the following courses might be good for you:

- 2nd grade math
- 3rd grade math
- 4th grade math
- 5th grade math

One practice that we've seen is to start, regardless of age, on and then move to , etc.

Course challenges and unit tests can be used to accelerate through material. If you don't have many gaps, you should be able to get through a previous year's content in 1-3 hours. If you do have gaps, it may take a bit longer, but that is good. This is your chance to fill in those gaps that might otherwise hold you back in the future.

You'll see that if you are able to put in a solid 30 minutes a day of math practice and keep leveling up at least 3 skills a week, you'll see big gains and, most importantly, really see the world in new and exciting ways!

One you are at your grade level, try to set a goal of leveling up at least 3 skills a week.
