

Mobile charging stations can be connected directly to the SunCap or grid

We have developed a simple charging station that can be connected to SunCap, our solar cell system. This allows you to use solar energy to charge vehicles, tools and electric building equipment. The charging stations can of course also be connected to an ordinary fuse box.

CONNECTS USING 4G

The system can easily be configured or expanded without physical access as the charging stations are connected via 4G. The charging stations can be monitored centrally by us.

- Connects via 4G so you are no longer dependent on WiFi
- You decide whether the system should be open or closed to other users
- Can be controlled via an app
- We can operate and maintain the system, if preferred
- Direct support when needed

WANT TO HEAR MORE? Please get in touch with your regular contact person at CP or call us on our main number: +45 46 14 06 00.
