

# 340B Management Package

ScriptPro's automated, intelligent 340B engine qualifies and processes prescription data to give you configurable, real-time 340B prescription processing accuracy today and every day.

The 340B Management Package provides pharmacies using the SP Central Pharmacy Management System<sup>1</sup> an advanced tool for managing 340B programs. Pharmacies no longer need to spend valuable resources separating 340B inventory costs, monitoring patient eligibility, or tracking and reconciling prescriptions to ensure audit compliance.

With the following tools, the 340B Management Package maximizes profits, minimizes paperwork, and streamlines workflow so you can focus on a higher priority – providing the best care and service to your patients.

- **340B Eligibility Interface<sup>2</sup>** – Prescription 340B eligibility is updated in SP Central based on interface data received and parameters set by the qualified health center or covered entity's Electronic Health Records (EHR) system. This inbound data is captured via an orders interface.
- **340B Claims Processing** – ScriptPro establishes 340B claims processing payer sheets to ensure 340B-specific data is transmitted appropriately in compliance with 340B rules and regulations established by the Public Health Service Act of 1992 (HRSA). This eliminates the need to sort out duplicate discounts/rebates submitted under Medicaid. And, it provides a completely seamless solution for customers wishing to carve out Medicaid.
- **340B Supplier EDI Interface and Inventory Setup** – ScriptPro works with the customer's 340B supplier to implement an Electronic Data Interchange (EDI) for electronic transmission of orders to and order acknowledgement from the supplier.

For customers upgrading to SP Central Pharmacy Management System, ScriptPro converts existing 340B inventory and loads on-hand quantities and pricing into a 340B Inventory Center that is capable of electronically sending orders to and receiving acknowledgement from the supplier. In the case of a customer starting a new 340B account, ScriptPro also can load quantities, Min/Max order points, and pricing using a spreadsheet provided by the customer or the supplier. Supplier pricing is updated daily, weekly, or monthly according to the supplier's update schedule.

[\(over\)](#)

<sup>1</sup> 340B Management Package requires purchase of SP Central Pharmacy Management System.

<sup>2</sup> Requires HL7 interface with EHR system; inbound eligibility messages sent to SP Central Pharmacy Management System. Coordination of interface work between EHR system provider and ScriptPro required.

## Features and Benefits

- Real-time 340B eligibility check
- 100% accurate 340B/non-340B inventory selection
- Prevents Medicaid Double-Dip and utilizes pre-determined price tables when submitting claims
- Automates true-up for rebills (for up to one year after the fact!)
- Ensures audit compliance!

## About ScriptPro

We create innovative, seamlessly-integrated robotics and workflow systems that optimize pharmacy services. As patient care progresses from inpatient to outpatient and long-term care settings, the need for advanced systems to support medication therapy is evolving. Our solutions include strategic planning and financial management services that help health systems succeed in a dynamic and financially challenging environment.

# 340B Management Package (continued)

Because SP Central Pharmacy Management System supports multiple inventory centers, you can virtually separate, track, order, and report on each inventory type (340B, Pharmacy, OTC, etc.), including numerous 340B accounts for multiple contracts. This feature, combined with the 340B Eligibility Interface and 340B Claims Processing, ensures 340B stock is always purchased, adjudicated, and replenished according to HRSA standards.

- **340B Price Tables** – ScriptPro works with the pharmacy’s finance team and/or pharmacy manager to establish a 340B pricing model that meets the pharmacy’s needs. Using this information, ScriptPro configures Price Tables accordingly to ensure proper pricing is submitted and prescriptions are billed at the customer’s preferred rate to ensure maximum return from the third party payer.
- **340B Reports** – System reports are available to track both 340B product usage for on-demand compliance reporting and for financial purposes, such as viewing fill order profit margins. All reports are exportable to allow further in-depth analysis of data.

- **340B Reconciliation** – Integrate powerful 340B accounts receivable management by also implementing ScriptPro’s Third Party Management System (TPMS) to oversee all aspects of contracts, third party billing, and collection of third party prescription reimbursements, including 340B prescriptions. No other 340B solution on the market offers this level of capability. Please see the Third Party Management System (TPMS) Contracts & A/R product sheet for more detail.

The 340B Management Package seamlessly integrates with ScriptPro’s SP Central Pharmacy Management System to provide efficient and safe prescription fulfillment while providing broad visibility of 340B eligibility to safeguard compliance.

Choose the most comprehensive 340B management solution available; choose ScriptPro’s 340B Management Package.
